Solutions for safe working on electrical installations

Safe when it matters most

Protect people and systems from electrical accidents. You can mitigate the risks posed by arc faults with the help of a comprehensive protection concept.

You will find an overview on our **website**.

Safe when it matters most

Comprehensive arc fault protection concept

Every company has an obligation under occupational health and safety legislation to protect its employees from possible accidents.

Step-by-step to your protection concept

Analyse the work situations for your electrical installations. Use the

- arc fault risk check list
- the "Let's check!" online seminar
- and the dialogue guideline

to assess and optimise arc fault protection measures.

DEHN protects.

Dear business associates,

For more than 110 years, the family-owned company DEHN SE has stood for safety and pioneering spirit in the fields of lightning protection, surge protection and safety equipment. With great passion and commitment, our employees develop safe and effective protection solutions and components for key issues of this day and age. Such as the expansion of renewable energy, e-mobility and its entire infrastructure, and the protection of those who work in these newly emerging ecosystems. Since 1952, the "DEHN Safety Equipment" range of products and services has centred around safe work on electrical installations.

- Due to the steady expansion of electric mobility, high-voltage (HV) systems are becoming increasingly common in vehicles of all kinds. New working conditions due to the use of e-vehicles or charging stations can lead to electrical hazards. Some of these dangers are new and need to be assessed in order to protect your own employees and external service personnel.
- **DEHNarX** supports industrial companies and manufacturers with the **risk assessment. By assessing the risks when working on electrical installations, suitable protective measures**, especially correct selection and provision of appropriate protective equipment, can be defined.
- **Railways** stand for climate-friendly mobility. Safety and availability are essential assets in this area. This applies to the planning of new systems as well as to maintenance and repair. You can find the requisite safety devices in a separate chapter of this catalogue.
- Technical measures such as the **DEHNshort** arc fault protection system protect people and optimise the availability of the energy supply. The use of these protection systems is established with all renowned manufacturers of low-voltage switchgear installations and long since regarded as state of the art.
- **Modern, comfortable and well-fitting protective equipment** is essential for both the safety and motivation of your employees when working on electrical installations. This is the reason why we are constantly optimising our **DEHNcare range** of protective clothing against the effects of arc faults. For jobs where high arc fault energies are to be expected, the new DEHNcare ArcFit High Level Protection (HLP) offers PPE 4 category protection according to NFPA 70E.

Benefit from our more than 70-year experience in electrical safety. In this catalogue you will find all the necessary measures and means of protection, e.g. to develop a **comprehensive protection concept against arc faults. The TOP principle from the German Occupational Health and Safety Act** provides orientation when defining protection measures. Develop a protection concept for electrical risk situations in your company step by step. This keeps your employees safe when it matters most.

I appreciate your interest and the opportunity to work with you!

Ensuring everyday safety

DEHN offers practical all-round services for **the organisation** of personal protection in your everyday electrotechnical work.

Buying high-quality and tested products for the implementation of electrical safety rules is only the first step towards safety. By law and by standard, you must regularly check your safety devices

(voltage detectors, EaS devices, insulating sticks). We can do this for you!

You can also leave the professional cleaning of your medium- and low-voltage switchgear installations to us. Another important point:

What is the situation when it comes to assessing the risk of arc faults in your installations? When was the last risk assessment? Here, too, we can now offer you assistance with the DEHNarX service.

You will find your contact person on the next few pages:

One of its kind worldwide: Digitalised high-voltage test laboratory

Thousands of periodic inspections are carried out annually in the DEHN high-voltage test facility. In 2021, significant investments were made in the test facility, which has been in use since 1993. Alongside hardware modifications, such as a new frequency converter, the interactive voice assistant, a globally unique feature, was implemented on the software front. These extensive modifications make the DEHN test facility with voice assistant a unique innovation. The updated emergency shut-off and the safety circuit control system also put the test facility on a high level as far as occupational and plant safety are concerned.

If you have any questions about our test facility or range of services, please contact us: retoure@dehn.de

Automated product testing - advantages for you

- **Quicker periodic inspection**
The processing times for periodic inspections are shorter. Thanks to the optimised, digitalised processes in our high-voltage test field, your safety devices are available again sooner.
- **The test spectrum is widening**
With the new frequency converter, installed for the first time worldwide, it is possible to generate voltages of up to 250 kV in a frequency range of 16.7 to 200 Hz. The voltage quality remains consistently high over the entire voltage range.
- **Process-reliable periodic inspections**
Existing processes are set-up-automated and the entire plant is raised to a new technical level. DEHN employees can initiate the respective test steps via voice assistant. The automation sets the appropriate voltage and the travel of the test setup. The settings and measured values can be monitored on the screens in the test facility.
- **New benchmarks for occupational and plant safety**
The modernisations achieve the highest safety level (Performance Level E) currently achievable for a plant of this type.
- **Customised high-voltage testing**
Contact us for your individual high-voltage tests.

Detecting and evaluating the risk of an arc fault.

DEHNarX Risk Assessment

Evaluate the risk of arc faults and define protection measures according to the TOP principle

Meet the requirements of work safety legislation

The specific task of an "arc fault risk assessment" is not properly clarified in many companies. According to §5 of the German Occupational Health and Safety Act, every employer must carry out an assessment of the electrical hazards for their employees in order to deduce adequate work protection measures.

Can be booked in modular and customised form

The DEHNarX service evaluates arc fault risks/energies according to DGVU-I 203-077 or the American process NFPA 70E / IEEE 1584.

The existing protection measures in your company are checked and optimised, and additional state-of-the-art measures are recommended. Comprehensive documentation right through to safety-increasing system marking can be booked individually. Get in touch with us so that we can put together a customised offer for you.

Which method do you use for risk assessment?

DGVU-I 203-077 is course of action recommended by BG ETEM for dealing with thermal hazards caused by arc faults.

Benefits of DEHNarX Risk Assessment

- **Legitimate.** According to §5 of the German Occupational Health and Safety Act, every employer must carry out an assessment of the electrical hazards for their employees in order to deduce adequate work protection measures.
- **Standard-compliant.** The risk assessment is performed according to DGUV-I 203-077 or the American procedure NFPA 70E / IEEE 1584
- **Modular.** The services of the risk assessment can be customised to requirements.
- **Authoritative.** Based on the assessment, suitable protection measures can be defined as per the TOP principle.
- **Activating.** The results of the risk assessment help the people in charge and fitters reduce the probability of an arc fault occurring.

Those responsible for occupational safety and installations ensure a transparent arc fault protection concept

Create transparency about your arc fault protection concept for all those concerned working on electrical workstations. According to the TOP principle, and in descending order or priority, this includes technical, organisational and personal arc fault protection measures.

When was the last arc fault risk assessment performed at your organisation?

You want to download the customer presentation or require a consultation. Information can be found on the DEHNarX website:

Check voltage detectors regularly

Periodic inspection of protective and auxiliary equipment

DGUV Regulation 3 "Electrical installations and equipment" is the central German accident prevention regulation for electrical engineering. It applies to electrical installations and equipment such as voltage detectors, phase comparators and voltage detecting systems. It is also recommended for non-electrical work in the vicinity of electrical installations and equipment. The inspection intervals for protective and auxiliary equipment are specified in §5 Inspections. As the operator, you are responsible for maintenance, keeping deadlines and conducting the inspection!

Only tested devices protect lives

- Regular maintenance tests ensure that your devices are in a proper and safe condition
Get the benefit of our reminder service

- Test is documented on the device and in a separate test report
- Periodic inspection of voltage detectors, phase comparators, earthing and short-circuiting devices, etc. at the DEHN Service Centre.
- Periodic inspection at your location earthing and short-circuiting devices

It's simple! Send operating devices such as voltage detectors to DEHN without any prior notification.

You can find all information here:

Use the reminder service!

Here you have the option of having us remind you free of charge of the prescribed periodic inspections in line with DGUV. You can register devices of all manufacturers for the reminder service.

Customers who have DEHN voltage detectors are automatically reminded every **six years!**

Configure earthing and short-circuiting devices online

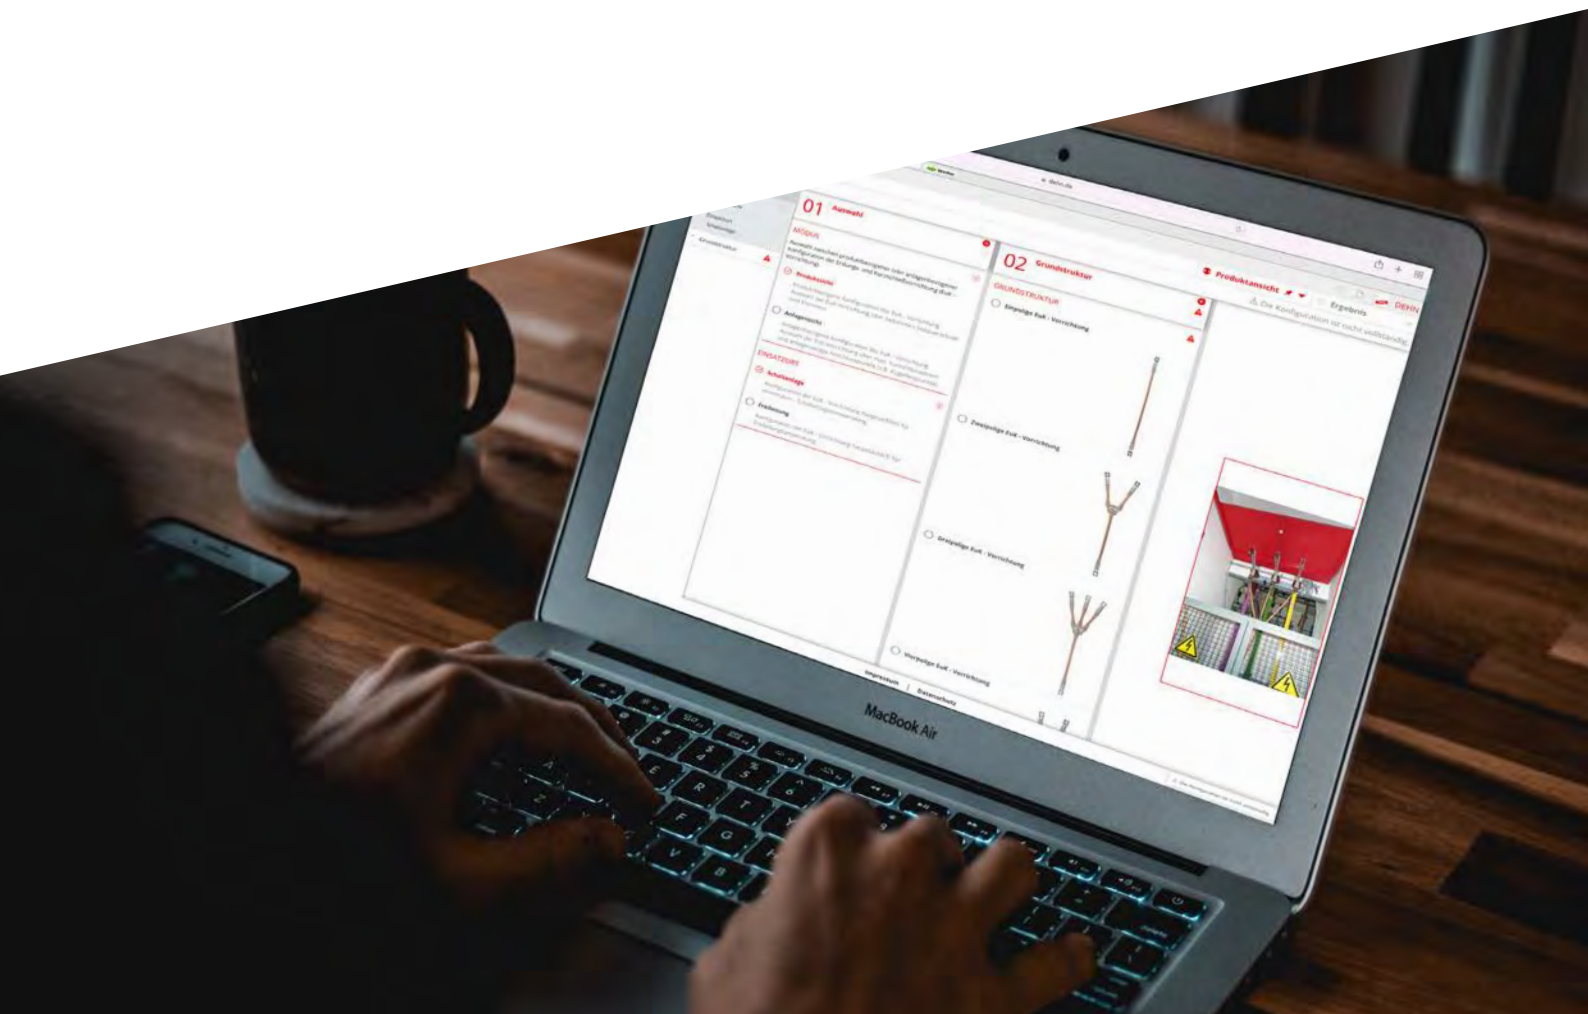

The 4th safety rule when working on electrical installations is "earthing and short-circuiting". This secures the de-energised state of the system for the duration of the work against interference voltages, atmospheric surges, unforeseen feedback and erroneous re-connection.

Only an EaS device that has been adapted to your system will ensure that you are safe when working on electrical systems. So, use the EaS configurator with its intuitive navigation to choose the right EaS device.

Customised for you:

- Select place of use, basic structure of the device: 1-pole, 2-pole, 3-pole, material type, cable cross-section, length, connection elements, clamp and earthing stick
- With a variant number you can order a finished product again and again.
A permanent plausibility check takes place in the background.

You can find the new EaS configurator and a demo version here:

Technical testing of earthing and short-circuiting devices with the LoRe measuring device

Make sure you keep the regular inspection intervals for earthing and short-circuiting devices.

You have two ways of technically assessing the overall condition of your EuK devices with a measurement procedure:

1. Have your EuK devices checked by DEHN

Send us your EaS and we will check your portable safety devices to ensure that they are in perfect working order.

Alternatively, we can inspect your EaS at your location.

Shipping information can be found here:

2. Test your EaS device yourself

With the Lore measuring device, you can detect hidden damage that cannot be revealed by a visual inspection alone. Whereas previously the strands had to be cut open for testing, the EaS devices are now tested non-destructively. Measured values confirm that your EaS is in perfect working order.

Safe working on electric systems

Good to know: We have a new product family name for our protective and operating equipment for working on electrical installations:

DEHNproX. This made-up word is a combination of DEHN + protect + X. You are already familiar with the company slogan DEHNprotects. It describes DEHN's basic philosophy of providing

protection against hazards. The "X" in the DEHNproX product family name stands for all the hazards averted by high-quality protective equipment (X = crossing out danger). In the area of electrical occupational safety, these are electric shocks and arc faults.

In the DEHNproX product family, you will find all operating and protective equipment for safe working on electrical installations. Listed are products for the implementation of the five safety rules and products for live working.

German Social Accident Insurance (DGUV) Regulation 3 (formerly accident prevention regulations (BGV A3))

Voltage detectors must be checked according to the DGUV regulation 3 (previously BGV A3) for compliance with the limit values as specified in the electrotechnical rules. This test is carried out in the high-voltage test laboratory at DEHN and includes, among other things:

- Testing the discharge current
- Testing for clear indication
- Testing the protection against bridging
- Testing by visual inspection, manual test and measuring

The maintenance test is documented in a test report and on the device itself.

The intervals for maintenance tests of voltage detectors depend on their conditions of use, e.g. frequency of use, stress due to environmental conditions and transport, etc, however, according to DGUV regulation 3, **at least every 6 years**.

Structure of the voltage detector

Voltage detectors according to IEC/EN 61243-1 (DIN VDE 0682-411) are designed to verify on all poles at the work location that the installation is dead according to EN 50110-1 (DIN VDE 0105-100). Only electrotechnically skilled or instructed persons are allowed to verify on all poles at the work location or as close as possible to the work location that the installation is dead.

Voltage detectors must be tested for correct operation immediately before and after use. Correct operation of voltage detectors without self-testing element must be verified by contacting a part of the installation connected to operating voltage. Verifying that the installation is dead using a voltage detector is considered live working.

Voltage detectors may only be used for the nominal voltages / nominal voltage ranges as indicated on the rating plate. The user may be at risk if the voltage detector is used for voltages other than indicated on the rating plate (incorrect indication, electric shock, arcing).

Voltage detectors labelled with "For indoor use only" may only be used in indoor installations.

Voltage detectors labelled with "For use in wet weather conditions" may be used in all weather conditions (rain, snow, fog and dew).

Voltage detectors according to IEC/EN 61243-1 (DIN VDE 0682-411) are only suitable to a limited extent for use in **factory assembled (type-tested) installations**. If space in installations is confined, flashover may occur when inserting the test prod into the installation. The user of the voltage detector or the operator of the switchgear installation must contact the manufacturer of the type-tested installation to find out whether the voltage detector may be used in the installation (please refer to the table on the next page: Application of voltage detectors in type-tested, factory assembled switchgear installations).

Design of voltage detectors

Voltage detectors according to IEC/EN 61243-1 (DIN VDE 0682-411) are **single-pole** devices designed to make contact with the part of the installation to be tested.

There are **two mechanically different designs** of voltage detectors: Complete and separate voltage detectors.

Complete voltage detectors (PHE4, PHE III, PHE and PHG II) consist of an insulating stick, indicator and test prod and are tested as a complete unit.

Separate voltage detectors (PHE III indicator with test prod) must be attached to a suitably rated insulating stick.

Single-pole **voltage detectors** typically consist of a **handle, insulating element, indicator** and **test prod with contact electrode**.

The **insulating element** is the section of a voltage detector between the hand guard and the red ring. It ensures that the user maintains an adequate safety distance for safe operation. The **test prod** (contact electrode extension) with a contact electrode **above the red ring** allows to reach remote parts of the installation and to **eliminate** the influence of **interference fields**. Voltage detectors are classified into two categories based on their behaviour in case of interference fields or their field of application. Voltage detectors of **category "L"** (line) with a short test prod (without contact electrode extension) are designed for use on overhead lines.

Voltage detector of **category "S"** (switchgear) with a long test prod (with contact electrode extension) are resistant to interference fields and are therefore used in switchgear installations. They are also suitable for overhead lines.

The **hand guard** provides a visible barrier between the handle and the insulating element and prevents the user from making contact with the insulating element.

The **red ring** indicates the end of the insulating element in the direction of the test electrode. This provides the user with a visible limit for contact with live parts in the installation. The **insulating element** between the red ring and the hand guard must not contact live parts, however, it may contact earthed parts.

The **test electrode** is the part of the voltage detector that is used to make contact with the part of the installation to be tested.

The nominal voltage selector switch allows to switch between two nominal voltage ranges. For safety reasons, the voltage detector can only be switched on if the selector switch is switched to the most sensitive range of 3 kV to 10 kV. The switch snaps into the relevant position, thus providing protection against inadvertent switching. A magnetically operated, wear-resistant reed switch changes the switching position.

For	Indoor and outdoor installations
Indication	Acoustic and visual
Self-testing element	Yes
Material (test electrode)	Copper alloy/gal Sn
Material (test prod)	Glass-fibre reinforced epoxy resin tube
Material (indicator)	Plastic, fully insulated

Standby function

The PHE III indicator with test prod has a standby function meaning that the device is automatically activated as soon as contact with energised equipment is made (without previous self-test) and visually and acoustically indicates "voltage present". When making contact with de-energised equipment, the indicator is not activated.

Attention

The PHE III indicator with test prod may only be used in combination with a suitably rated insulating stick.

Telescopic insulating stick, with universal gear coupling

With scale for measuring the ground clearance, mounted support included.

Type	ISMTC N 36 ZK 10600
Part No.	766 037
Nominal voltage (U _N)	Up to 36 kV
Total length (l _{G max} / l _{G min})	10,600 / 1750 mm
Length (handle) (l _{H min})	1680 mm
Material	Glass-fibre reinforced epoxy resin tube

PHG II Voltage Detector

PHG II voltage detector used in a type-tested switchgear installation.

Nominal voltages up to 20 kV / 50 Hz

Easy and safe testing

- Cost-effective
- Reliable indication

General technical data:

Standard	EN/IEC 61243-1 (DIN VDE 0682-411)
Temperature range	-25 °C ... +55 °C, climatic category N
Design	Complete

Indication	Visual, 3 LEDs
Function	Passive voltage detector without batteries
Material (test electrode)	Cu/gal Sn
Material (test prod)	Glass-fibre reinforced polyester tube
Material (indicator)	Plastic
Material (insulating stick)	Glass-fibre reinforced polyester tube

Test for correct operation:

The EN 50110-1 (DIN VDE 0105-100) standard requires that voltage detectors be tested for correct operation directly before and after they are used.

Voltage detectors without self-testing element must be tested for correct operation by contacting parts of the installation connected to operating voltage.

On the test prod of the voltage detector there is a fork-shaped electrode.

Nominal Voltages up to 20 kV / 50 Hz

Category "S" for indoor switchgear installations.

Category „S“ and „L“

Devices of category „S“ may only be used in outdoor switching stations, devices of category „L“ for overhead lines only. Devices of category „S“ / „L“ may be used both for outdoor switching stations and overhead lines.

Use for overhead lines

The green ring on the ASP distance voltage detector with category „L“ electric field sensor is used to make contact with the last earthed protective fitting in such a way that the electric field sensor points in the direction of the overhead conductor fixed at the other end of the insulator.

Use in outdoor switching stations

The green ring on the arm of the ASP distance voltage detector with category „S“ electric field sensor is used to make contact with the lowest insulator plate at a right angle. If an earthed protective fitting is available, contact is made at the next possible insulator plate above the protective fitting.

Category „L“, 50 Hz

Category „L“ for overhead lines in accordance with the DIN VDE V 0682-417/10.2013 preliminary standard.

Type	ASPS 110 420 L

HSA 194 High-Voltage Indicator

High-voltage indicator used on a 110 kV overhead line.

Nominal voltage range 110 ... 420 kV / 16.7 and 50 Hz

Easy and safe testing

- For contactlessly verifying that switchgear and high-voltage overhead lines or centre-earthed monophasic traction power lines are dead
- Cost-effective / space-saving transport

Special instructions for the use of HSA 194 110 420 SN7737 (Part No. 767539)

The device can be switched between the „climbing check“ mode (switch position when climbing the tower) and the „110 ... 420 kV“ mode for verifying that the overhead conductor is dead.

Switch position „climbing check“

When climbing the lattice tower, the switch position „climbing check“ allows to check from the corner leg whether the next overhead conductor (or conductor bundle) is still energised when approaching it. During this check, the high-voltage indicator is moved closer towards the next overhead conductor and moved within 0.5 m (see Fig. 1). If the conductor is energised, there is a visual (red flashing light) and acoustic signal. The **minimum distance A (min)** (according to the nominal voltage in Table 2) between the operating head of the high-voltage indicator and the overhead conductor must be observed. The customer must determine the maximum distance A (max) (safe tripping of the high-voltage indicator when approaching the overhead conductor) depending on the nominal voltage and document it in the operating instructions.

Using the high-voltage indicator when climbing lattice towers does not replace verifying absence of voltage from the cross arm.

Figure 1: Example of application on the corner leg of a lattice tower with switch position „climbing check“ (only HSA 194 110 420 SN7737)

Nominal voltage	Min safety distance A (min.)
110 kV	2000 mm

General application notes for the HSA 194

Switch position voltage range „110 ... 420 kV“

To verify absence of voltage from the tower cross arm, place the green ring of the high-voltage indicator on the last earthed protective fitting (or earthed insulator cap) of the insulator so that the operating head of the high-voltage indicator (see Fig. 2) points towards the overhead conductor to be tested, which is attached to the other insulator end (longitudinal axis of the device in parallel to the longitudinal axis of the insulator). If the conductor is energised, there is a visual (red flashing light) and acoustic signal.

Application notes

The operating head of HSA 205 high-voltage indicator is fitted with a yellow switching ring, which is used to set the required nominal voltage range, either 1 to 30 kV, 30 to 220 kV or 110 to 420 kV. The transparent insulating cap must be used in the voltage range from 1 to 30 kV. Provided that the insulating tube and cap of the high-voltage indicator are in a dry and clean condition, the minimum distance A can be reduced for nominal voltages up to 30 kV. If these conditions cannot be ensured, the minimum distance A must be maintained!

Structure of phase comparators

Phase comparators in accordance with EN/IEC 61481-1 (DIN VDE 0682-431-1) are designed for testing for in-phase condition of three-phase systems.

Only electrically skilled or instructed persons are allowed to test for in-phase condition. Phase comparators have to be tested for correct operation immediately before and after use.

Phase comparators without self-testing element have to be tested for correct operation by making contact with a part of the installation connected to operating voltage. Testing for in-phase condition by means of a phase comparator is considered live working. Phase comparators may only be used for the nominal voltages / nominal voltage ranges as indicated on the rating plate. The user may be at risk if the voltage detector is used for voltages other than indicated on the rating plate (incorrect indication, electric shock, arcing).

Phase comparators labelled "For indoor and outdoor installations" must not be used in wet weather conditions.

Phase comparators labelled "Also suitable for use in wet weather conditions" may be used in all weather conditions such as rain, snow, fog and dew. Phase comparators in accordance with IEC/EN 61481-1 (DIN VDE 0682-431-1) are only suitable to a limited extent for use in factory assembled (type-tested) installations.

When inserting the test prod, flashovers may occur due to the restricted space in these installations. The user of the phase comparator or the operator of the switchgear must ask the manufacturer of the type-tested equipment whether the existing phase comparator may be used.

Structure of phase comparators

Phase comparators can be designed as a two-pole device (resistive phase comparator) in accordance with IEC/EN 61481-2 (DIN VDE 0682-431-2) or as a single-pole device (capacitive phase comparator) in accordance with IEC/EN 61481-1 (DIN VDE 0682-431-1). The structure of the PHV I single-pole phase comparator is similar to that of a capacitive voltage detector. The functional principle of single-pole phase comparator is based on a microprocessor controlled electronic storage system.

Single-pole phase comparators consist of a handle with hand guard, insulating element, indicator and test prod with contact electrode.

The **insulating element** is the section of a phase comparator between the hand guard and the red ring. It ensures that the user maintains an adequate safety distance for safe operation.

The **test prod** with a contact electrode above the red ring makes it possible to reach remote parts of the installation and to eliminate the influence of interference fields.

The **hand guard** is a clearly visible and tangible barrier between the handle and the insulating element. It prevents the user's hand from slipping off the handle and making accidental contact with the insulating element.

The **red ring** marks the end of the insulating element towards the test electrode. It provides the user with a visible limitation for contact with live parts of the installation. The insulating clearance between the red ring and hand guard must not contact live parts, but contact with earthed parts is allowed.

The **test electrode** is part of the phase comparator which is used to make contact with the uninsulated part of the installation to be tested.

German Social Accident Insurance (DGUV) Regulation 3 (formerly accident prevention regulations (BGV A3))

Phase comparators must be checked according to the DGUV regulation 3 (previously BGV A3) for compliance with the limit values as specified in the electrotechnical rules. This test is carried out in the high-voltage test laboratory at DEHN and includes, among other things:

- Testing the discharge current
- Testing for clear indication
- Testing the protection against bridging
- Testing by visual inspection, manual test and measuring

The maintenance test is documented in a test report and on the device itself.

The intervals for maintenance tests of phase comparators depend on their conditions of use, e.g. frequency of use, stress due to environmental conditions and transport, etc, however, according to DGUV regulation 3, **at least every 6 years**.

DEHNcap/P Voltage Indicator

DEHNcap/P passive voltage indicator used in an encapsulated switchgear installation.

Nominal voltages up to 45 kV / 50 Hz
Easy verification of isolation from supply voltage

- Cost-effective

General technical data:	
Standard	EN/IEC 61243-5 (DIN VDE 0682-415)
Temperature range	-25 °C ... +55 °C
Degree of protection	IP 66
Type of device	Voltage indicator
Use	Can also be used as permanent voltage indicator

Test for correct operation

EN 50110-1 (DIN VDE 0105-100) requires that voltage indicators be tested for correct operation shortly before and after use. Passive indicators without self-testing element must be tested for correct operation by plugging them into test sockets connected to operating voltage or into a test unit (DEHNcap/P test unit).

DEHNcap/P-HR

Type SAG DCA P ...	HR GA
Part No.	767 101
Dimensions	40 x 48 x 35 mm
Plug spacing	19 mm
Indication threshold (HR system)	90 V
Input impedance (HR system)	36 MOhms

DEHNcap/P-LRM

Type SAG DCA P ...	LRM GA
Part No.	767 102
Dimensions	40 x 48 x 35 mm
Plug spacing	14 mm
Indication threshold (LRM system)	5 V
Input impedance (LRM system)	2 MOhms

Accessories for DEHNcap/P Voltage Indicator

Test unit for DEHNcap/P

Type	TG DCA
Part No.	767 110
Nominal voltage (U _N)	230 V
Frequency	50 Hz
Nominal capacity	500 mW
Max. short-circuit current at the test socket	Approx. 20 µA
Dimensions	43 x 75 x 35 mm

Electrical and mechanical interface requirements for pluggable HR, LR and LRM voltage detecting systems

System description		HR high resistance	LR low resistance	LRM low resistance, modified
Input impedance of the indicator	X _C	36 MΩ	2 MΩ	2 MΩ
Electrical response conditions of the interface	I	2.5 µA	2.5 µA	2.5 µA
Electrical response conditions of the interface	U	90 V	5 V	5 V
Socket arrangement and minimum spare area A for indicator or plug				
Plug arrangement				

DEHNcap/A Voltage Indicator

Self-test of a DEHNcap/A voltage indicator.

Nominal voltages up to 45 kV / 50 Hz
Safe verification of isolation from supply voltage

- User-friendly
- Easy application

General technical data:

Standard	EN/IEC 61243-5 (DIN VDE 0682-415)
Temperature range	- 25 °C ... + 55 °C
Field of application	Active voltage indicator for testing
Self-testing element	Yes

Self-testing element

DEHNcap/A electronic voltage indicators have an integrated self-testing element. By simply pressing the test button, the electronic circuit is tested for correct operation. The self-test is automatically performed as soon as the indicator is switched on. The voltage indicator is only operational if the test button is pressed, i.e. the function test was performed successfully.

DEHNcap/A-LRM

Type	SAG DCA A LRM
Part No.	767 112
Dimensions	120 x 60 x 25 mm
Plug spacing	14 mm
Type of plug	2 multilam plugs (Ø4 mm)
Indication threshold (LRM system)	5 V
Input impedance (LRM system)	2 MOhms

DEHNcap/IT Interface Test Unit

DEHNcap/IT interface test unit allows to carry out maintenance tests on coupling systems of switchgear installations according to IEC/EN 61243-5 (DIN VDE 0682-415).

Nominal voltages up to 45 kV / 50 Hz
Easy and safe testing

- User-friendly
- Easy handling

General technical data:

Standard	EN/IEC 61243-5 (DIN VDE 0682-415)
Temperature range	- 25 °C ... + 55 °C
Field of application	Active indicator for maintenance tests on coupling systems
Self-testing element	Yes

Self-testing element

The DEHNcap/IT interface test unit has an integrated self-testing element. By simply pressing the test button, the electronic circuit is tested for correct operation. The self-test is automatically performed as soon as the indicator is switched on. The interface test unit is only operational if the test button is pressed i.e. the function test was performed successfully.

DEHNcap/IT-LRM

Type	SPG DCA IT LRM
Part No.	767 122
Dimensions	120 x 60 x 25 mm
Plug spacing	14 mm
Type of plug	2 multilam plugs (Ø4 mm)
Input impedance (LRM system)	2 MOhms
Test threshold	3.2 µA

DEHNcap HR-LRM Test Kit

Kit in a plastic case for verifying that the installation is dead and testing the interface as well as for in-phase conditions in HR and LRM systems.

Nominal voltages up to 45 kV / 50 Hz

Easy and safe testing

- Complete test kit for universal use
- Easy operation

General technical data:

Standard	EN/IEC 61243-5 (DIN VDE 0682-415)
Temperature range	-25 °C ... +55 °C

DEHNcap HR-LRM Test Kit

Kit includes:

Type	PS DCA HR LRM
Part No.	767 150
Dimensions	395 x 295 x 105 mm

DEHNcap/PC-LRM Phase Comparator

DEHNcap/PC-LRM phase comparator with two HR-LRM test adapters used in an HR switchgear installation.

Nominal voltages up to 45 kV / 50 Hz

Easy and safe testing

- User-friendly
- Easy handling

General technical data:

Standard	EN/IEC 61243-5 (DIN VDE 0682-415)
Temperature range	-25 °C ... +55 °C
Design	Active indicator for testing for in-phase conditions on LRM test sockets
Field of application	For HR test sockets with two HR-LRM test adapters
Self-testing element	Yes

By attaching two optional HR-LRM adapters (Part No. 767 133), the DEHNcap/PC-LRM phase comparator can also be used for phase comparison in HR systems. DEHNcap/PC-LRM is designed as a universal phase comparator in accordance with EN/IEC 61243-5 (DIN VDE 0682-415) and detects zero crossings, but no voltage values.

DEHNcap/PC-LRM

Type PV DCA PC ...	LRM
Part No.	767 132
Dimensions	145 x 85 x 32 mm
Measuring cables	3 measuring cables with multilam plug (Ø4 mm)
Length (measuring cable)	2000 mm
Indication threshold (LRM system)	5 V
Input impedance (LRM system)	2 MOhms

DEHNproX - 3. Verify that the installation is dead - DEHNcap voltage detecting system

DEHNcap/PC-LRM Phase Comparator Kit

Phase comparator in an artificial leather bag (KLT 23 164).

Type PV DCA PC ...	LRMT
Part No.	767 139
Dimensions	145 x 85 x 32 mm
Measuring cables	3 measuring cables with multilam plug (Ø4 mm)
Length (measuring cable)	2000 mm
Indication threshold (LRM system)	5 V
Input impedance (LRM system)	2 MOhms

Accessories for DEHNcap/PC-LRM Phase Comparator

Artificial leather bag, empty

With carrying strap.

Type	KLT 23 16 4
Part No.	767 500
Suitable for	DCA PC
Dimensions	235 x 160 x 40 mm
Colour	Black ●

DEHNcap Test Adapter

The HR-LRM test adapter for plugging an LRM indicator into a HR test socket.

Easy and safe testing

- Easy mechanical and electrical adaptation to HR, LR test sockets
- Measuring impedance for maintenance tests on coupling systems with suitable μA meter
- 4 mm safety plugs or sockets
- Energised HR plug, insulated

General technical data:

Standard	EN/IEC 61243-5 (DIN VDE 0682-415)
Temperature range	-25 °C ... +55 °C

HR-LRM Test Adapter

For electrical and mechanical adaptation of HR (HO) to LRM systems.

Used as a measuring impedance with $X_C = 36 \text{ MOhms}$ for maintenance tests on HR coupling systems (with suitable μA meter).

Type MA DCA ...	HR LRM
Part No.	767 133
Dimensions	90 x 50 x 30 mm
Plug spacing	19 mm
Socket spacing	14 mm
Type of plug	2 multilam plugs (Ø4 mm)
Type of test socket	2 sockets (Ø4 mm)

LR-LRM Test Adapter

For mechanical adaptation of LR (NO) to LRM systems.

Type MA DCA ...	LR LRM
Part No.	767 136
Dimensions	100 x 50 x 30 mm
Plug spacing	jack, 6.3 mm
Socket spacing	14 mm
Type of plug	1 jack
Type of test socket	2 sockets (Ø4 mm)

Electrodes

- Safe contact with the part of an installation to be tested
- With M8 thread, to be screwed on the test prods of PHE4, PHE III, PHE voltage detectors as well as PHV I phase comparators

Onion-shaped Electrode

For contacting varnished busbars.

Type EL M8 ...	SZ PHE PHV
Part No.	766 913
Nominal voltage (U _N)	From 3 kV
Material	Brass/gal CuSn

Pin-shaped Electrode

For contacting varnished busbars.

Type EL M8 ...	S PHE PHV
Part No.	766 925
Nominal voltage (U _N)	From 3 kV
Material	StSt

V-shaped Electrode

For contacting round conductors.

Type EL M8 ...	V PHE PHV
Part No.	766 927
Nominal voltage (U _N)	From 3 kV
Material	Cu/gal Sn

Hook-shaped Electrode

For contacting overhead line conductors.

Type EL M8 ...	H PHE
Part No.	766 923
Application	For overhead lines only
Material	St/gal Zn

Fork-shaped Electrode

For contacting overhead line conductors.

Type EL M8 ...	G PHE
Part No.	766 924
Application	For overhead lines only
Material	StSt

Eaton Holec Magnefix Electrode

For Eaton Holec Magnefix switchgear installations of type MA, MD4, MF, MG, MY.

Type EL M8 ...	MAG PHE PHV
Part No.	766 915
Nominal voltage (U _N)	3 ... 15 kV
Material	Brass/gal CuSn, PVC

Test Probes

- Safe contact with the part of an installation to be tested
- With M8 thread, to be screwed on test electrodes of PHE4, PHE III and PHE voltage detectors
- For switchgear installations with limited access
- Available in different lengths and angles

Test Probe, straight

For switchgear installations with limited access (e.g. Calor Emag/ Isopond and Krone/KES)

Type PSO M8 ...	PHE
Part No.	766 916
Nominal voltage (U _N)	3 ... 24 kV
Total length (l _G)	420 mm
Length (l _I)	300 mm
For use at	
Suitable for	PHE4, PHE III, PHE

Test Probe, straight, 800 mm

For transformer stations and switchgear installations that require a greater insertion depth.

Type PSO M8 ...	PHE L800
Part No.	766 960
Nominal voltage (U _N)	3 ... 24 kV
Total length (l _G)	890 mm
For use at	
Suitable for	PHE4, PHE III, PHE

Test Probe, 25° angled

For switchgear installations with limited access.

Type PSO M8 ...	W25 PHE
Part No.	766 940
Nominal voltage (U _N)	3 ... 24 kV
Total length (l _G)	450 mm
Length (l _I)	280 mm
For use at	
Suitable for	PHE4, PHE III, PHE

Test Probe, 45° angled

For switchgear installations with limited access.

Type PSO M8 ...	W45 PHE
Part No.	766 941
Nominal voltage (U _N)	3 ... 24 kV
Total length (l _G)	395 mm
Length (l _I)	280 mm
For use at	
Suitable for	PHE4, PHE III, PHE

Test Probe, 90° angled

For switchgear installations with a limited tulip-shaped access from bottom to top.

Type PSO M8 ...	W90 PHE
Part No.	766 950
Nominal voltage (U _N)	3 ... 36 kV
Total length (l _G)	200 mm
Length (l _I)	370 mm
For use at	
Suitable for	PHE4, PHE III, PHE

Adapters and End Fittings

Adapter (Plug-In Coupling / T Pin Shaft)

For extending the handle of IS ... STK insulating sticks by an ES SQ or ES SQL earthing stick.

Type	AD HV STK SQ
Part No.	766 313
Total length (l _G)	275 mm

End Fitting STK (Plug-in Coupling)

For use as termination and protection

Type	A STK
Part No.	766 888
Total length (l _G)	85 mm
Diameter	30 / 43 mm

End Fitting STK with Eye

For use as protection and transport eye when working on overhead lines.

Type	AR STK
Part No.	766 889
Total length (l _G)	150 mm
Diameter	30 / 43 mm

Discharge and Equipotential Bonding Devices

Single-pole device for discharging static charges.

- For discharging static charges
- Different contact electrodes
- Coupling electrode, especially for round conductors (Ø12 ... 26.5 mm) of electrostatic precipitator systems
- Waterproof, plastic-sheathed cable entries, with additional anti-kink protection

General technical data:

Not for use in wet weather conditions	☀
Material (contact electrode)	Cu alloy/gal Sn
Material (contact and coupling electrode)	Zamak
Material (coupling electrode)	Bronze/gal Sn
Material (insulating tube)	Glass-fibre reinforced polyester tube

Maintenance test according to German Social Accident Insurance (DGUV) Regulation 3 (formerly accident prevention regulations (BGV A3))

According to DGUV regulation 3 (formerly BGV A3), §5 paragraph 1, operating equipment, which also includes EaS devices, must be checked to ensure it is in good condition and at specific intervals. The intervals shall be selected in such a way that defects which are to be anticipated are detected in good time. This test is carried out at DEHN or on the customer's premises according to a new measuring method^{*)} and includes

- Visual inspection to detect visible defects.
- Measurement of the total resistance at the stationary EaS device (static test)
- Measurement of the relative change in resistance in the cable and at the connection points of the moving EaS device (dynamic test).

The maintenance test is documented in a test report and on the device itself.

^{*)} This measuring procedure was developed on behalf of BG ETEM (German trade association for energy, textiles, electrical goods and media products) at the University of Applied Sciences Dresden (HTW Dresden).

Earthing and Short-Circuiting Devices

The key point of the five safety rules for dead working is earthing and short-circuiting at the work location. This measure ensures the de-energised state for the duration of the work, also with regard to interference voltages, atmospheric surges or erroneous reconnection.

Portable devices for earthing and short-circuiting may only be used if the absence of voltage has been verified immediately beforehand at the place of installation.

When connecting the earthing and short-circuiting device, the earthing cable must always be connected to the earthing system first, so that any residual or interference voltages present are discharged.

Portable devices for earthing or earthing and short-circuiting according to DIN VDE 0683-100 (EN/IEC 61230) are devices to be used manually which are brought up to and connected with the fixed connection points of parts of electrical installations for the purpose of earthing and short-circuiting (according to DIN VDE 0105-100 or EN 50110-1, section 6.2.4) without forced guidance (e.g. slots, sockets, guide rails). They consist of earthing and short-circuiting devices (EaS devices) and earthing sticks.

The **earthing and short-circuiting device** is a device with which electrical conductors can be both earthed and short-circuited. It consists of an earthing device and a short-circuiting device. The earthing device is a device for connecting the earth-termination system to a short-circuiting device or to the equipment to be earthed. It consists of a connection component (1) and earthing cable (4).

The short-circuiting device is a device for connecting the line conductors to be short-circuited. It consists of connection components (1+2), short-circuiting cables or bars (3) and, where necessary, connecting clusters (5).

The **short-circuiting bar** is a rigid short-circuiting device.

Connecting clusters connect the short-circuiting cables to each other and to the earthing cable or the short-circuiting bar to the earthing cable.

Connection components connect the earthing and short-circuiting cables or busbars directly or via intermediate links, e.g. via cable lugs, to the earthing system and the system parts, where necessary via fixed connection points. Fixed connection points are those points on system parts to which the earthing and short-circuiting devices are connected, e.g. cables, bars, fixed ball points, cylinder bolts, stirrups. The connection of the fixed ball point and the ball head cap of the earthing and short-circuiting device ensures the highest degree of short-circuit strength.

Fixed connection points are parts of the installation to which earthing and short-circuiting devices are connected (e.g. conductors, bars, fixed ball points, cylinder bolts, clamps etc.). Maximum short-circuit strength can be achieved by connecting the fixed ball point with the ball head cap of the earthing and short-circuiting device.

Earthing sticks are hand-held insulating sticks for bringing the connection components of earthing and short-circuiting devices up to parts of power installations for the purpose of earthing and short-circuiting. They consist of an insulating element, black ring, handle and coupling for holding a connection component. Earthing sticks must be selected according to the weight of the earthing and short-circuiting device to be installed (see specification: "maximum permissible load on the operating head in kg").

The **insulating element** is the part of the earthing stick between the black ring and the end of the earthing stick in the direction of the connection component. It ensures that the user maintains the required safety distance, and it provides sufficient insulation. In installations exceeding 1 kV, the insulating element must have a minimum length l_i of 500 mm.

A complete device for earthing and short-circuiting according to DIN VDE 0683-100 (EN/IEC 61230) consists of, e.g.:

- Fixed point/fixed ball point
- One or three-pole earthing and short-circuiting device or short-circuiting bar
- Fixed earthing terminal
- Earthing stick

Portable devices for earthing or earthing and short-circuiting

Earthed and short-circuiting devices as well as fixed ball and earthing points must be rated for the **short-circuit current** possible at the point of use. The required cable cross-sections depend on the max. short-circuit current I_k in A and the short-circuit duration T_k in s.

Note:

In the event of a short-circuit, the short-circuit current flows via short-circuiting devices, which is what the devices are rated for – but this is not the case with earthing devices. These do not carry short-circuit current and can therefore have a weaker design.

Cable cross-section:

In the case of three-pole earthing and short-circuiting devices, the cross-section of the earthing cable can always be reduced according to the following table for short-circuiting cables of 50 mm² and larger.

These earthing and short-circuiting devices with reduced earthing cable cross-section can be used in all networks without direct neutral earthing (e.g. compensated system with impedance neutral earthing).

For networks with direct (rigid) neutral earthing, the short-circuiting and earthing cables must have the same cross-section.

The required cable or bar cross-sections of the short-circuiting device can be determined from the diagrams or the table according to the short-circuit current and the short-circuit duration for an installation.

Cable Cross-Section	
Short-circuiting cable	Earthing cable
16 mm ²	16 mm ²
25 mm ²	25 mm ²
35 mm ²	35 mm ²
50 mm ²	25 mm ²
70 mm ²	35 mm ²
95 mm ²	35 mm ²
120 mm ²	50 mm ²
150 mm ²	50 mm ²

The current carrying capacity of the short-circuiting cable and the short-circuiting bar depends on the material, cross-section (A) and short-circuit duration (T_k).

The calculations were based on the worst case of the off-generator short-circuit (μ = 1) and the highest DC component (χ = 1.8) with I_k'' as the maximum initial short-circuit alternating current, which according to DIN VDE 0102 is equal to the sustained short-circuit current I_k and equal to the breaking current I_a:

$$I_k'' = I_k = I_a$$

Current carrying capacity of copper short-circuiting cables for use in three-phase systems

Initial cable temperature 20 °C

Final cable temperature 250 °C

$$A = 5.07 I_k'' \sqrt{T_k} \quad \text{for } T_k \geq 0.5 \text{ s}$$

Meaning here:

A Cable cross-section in mm²
I_k'' maximum initial symmetrical short-circuit current in kA as per DIN VDE 0102

T_k short-circuit duration in s

Current carrying capability of copper short-circuiting cables for use in DC installations

Initial cable temperature 20 °C

Final cable temperature 250 °C

$$A = 5.07 I_k'' \sqrt{T_k} \quad \text{for } T_k \geq 0.08 \text{ s}$$

Meaning here:

A Cable cross-section in mm²
I_k'' maximum initial symmetrical short-circuit current in kA as per DIN VDE 0102

T_k short-circuit duration in s

Current carrying capability of copper short-circuiting cables for use on the overhead contact lines of electric railways

Initial cable temperature 20 °C

Final cable temperature 250 °C

$$A = 6.0 I_k'' \sqrt{T_k} \quad \text{for } T_k \geq 0.06 \text{ s}$$

Meaning here:

A Cable cross-section in mm²
I_k'' maximum initial symmetrical short-circuit current in kA as per DIN VDE 0102

T_k short-circuit duration in s

Calculation example:

Specified: mains breaking capacity S_a
short-circuit duration T_k

Sought: required cable or bar cross-section A.

The off-generator short-circuit is used as a basis.

$$\text{Three-phase current} \quad I_k'' = I_k = I_a = \frac{S_a}{\sqrt{3} \cdot U_N}$$

$$\text{Single-phase alternating current} \quad I_k'' = I_k = I_a = \frac{S_a}{U_N}$$

With " I_k " the required cable or bar cross-section can now be calculated from the above equations or taken from the diagrams. The permissible current-time load capacity of an earthing and short-circuiting device is indicated by the cross-section specification on the short-circuiting cables or bars.

Note:

- Earthing and short-circuiting devices are only rated for a one-off exposure to the permissible current-time load!
- Short-circuiting cables of multipole earthing and short-circuiting devices must have the same cross-sections.
- The cable lengths of the earthing and short-circuiting devices should be at least 1.2 times the distance between two fixed connection points. Furthermore, the cable lengths selected should be as short as possible, as the cables will move violently in the event of a short-circuit.
- If earthing and short-circuiting devices are connected in parallel with cables to reach certain total cable cross-sections, the following conditions are to be observed:
 1. same cable lengths and cross-sections,
 2. same connection components and points,
 3. installation of the devices close together with parallel arrangement of the cables,
 4. for each cable, the permissible load capacity must be reduced to 75% of that of the corresponding the cable cross-section.

Note:

If it is ensured that earthing and short-circuiting devices connected in parallel are only loaded once with the full short-circuit current (no automatic reclosing or short interruption), the devices may be fully loaded.

Earth Connecting Plates

Earth connecting plate with fixed ball points and ball head cap with plastic handle.

- Connecting plate with high short-circuit current carrying capacity
- Single-pole connection of the phase arms
- For connecting single-pole earthing and short-circuiting devices to transformers of overhead line masts or to fuse holders
- For fixed ball points (Ø20 mm, Ø25 mm) or ring groove pins (Ø16 mm)

General technical data:	
Standard	EN/IEC 61230 (DIN VDE 0683-100) and fixed points in accordance with DIN 48088-1
Material (plate)	Aluminium
Material (terminal lug)	4 mm: Cu / gal Sn; 6 mm: HDG steel
Material (fixed point)	E-Cu / brass (CuNi2Si) / gal Sn

With three Fixed Ball Points and Ball Head Cap

Earthing and Short-Circuiting Cables, unequipped

Equipped three-pole earthing and short-circuiting device in a switchgear installation.

- To be equipped with connecting components
- Transparent sheath
- Waterproof and plastic-sheathed cable entries and node unit, additional anti-kink protection
- Standard anti-rotation crimped cable lugs (type PK1)
- Other cable lengths and crimped cable lugs can be selected online via the earthing and short-circuiting configurator
- Earthing and short-circuiting devices can be configured online via the earthing and short-circuiting configurator

General technical data:	
Standard	EN/IEC 61138 (DIN VDE 0283-3) and EN/IEC 61230 (DIN VDE 0683-100)
Temperature range	- 25 °C ... +55 °C
Material (cable)	Al, flexible; E-Cu, extra finely stranded and highly flexible
Material (sheath)	Thermoplastic polymer (flexible PVC compound YM2)
Hole (cable lug)	Ø12.5 mm

Crimped cable lugs, type PK1: Standard anti-rotation cable lug with cut-out.

Crimped cable lugs, type PK2: Cable lugs without cut-out for connecting parts from other manufacturers are available on request.

Crimped cable lugs, type PK3: Hook-type cable lugs up to cable cross-sections of 35 mm² are available on request.

Earthing Cable Cu in accordance with IEC 61138

The cable is delivered without crimped cable lugs and can be ordered by the metre.

Phase Connecting Elements for Switchgear Installations

Connecting the phase cable end with universal clamp to a fixed ball point.

- To be fitted to the phase cable end of single-pole to five-pole earthing and short-circuiting devices
- Type PK1 anti-rotation protection
- Other earthing and short-circuiting devices can be configured online via the earthing and short-circuiting configurator

General technical data:

Standard	EN/IEC 61230 (DIN VDE 0683-100), threaded T pin shaft DIN 48087
Temperature range	-25 °C ... +55 °C
Material (clamp body)	Cu alloy/gal Sn
Material (terminal lug)	Cu alloy/gal Sn
Material (shaft)	Cu alloy/gal Sn
Material (pressure plate)	Cu alloy/gal Sn / St/Zn

Two types of ball head caps are available:

- Rigid ball head cap
- Adjustable ball head cap (4x 90°)

The adjustable ball head cap allows the user to connect the earthing and short-circuiting device to fixed ball points that are installed in unfavourable positions. Thus, in the vast majority of cases, angled fixed ball points no longer have to be used.

Rigid ball head cap.

Adjustable ball head cap (4x 90°).

Phase Connecting Elements for Overhead Lines

Attaching a phase screw clamp to an overhead line.

- For connecting the phase cables of single-pole and three-pole earthing and short-circuiting devices to overhead lines
- With coupling aid for safe attachment on conductor cables
- Easy coupling due to spring-loaded clamp
- Anti-rotation protection type PK1 or PK2 and long threaded T pin shaft
- Earthing and short-circuiting devices can be configured online via the earthing and short-circuiting configurator

General technical data:

Earthing Kit

Earthing busbar and earthing cables mounted on a tubular earth electrode.

- For overhead line systems
- For driving the tubular earth electrode into the ground

General technical data:

Material (tubular earth electrode)	HDG steel
Material (bolt)	StSt (V2A)
Material (handle)	Wood
Material (earthing busbar)	HDG steel

Crimped cable lugs, type **PK3**:
Anti-rotation hook-type cable lug mounted on a three-pole earthing busbar.

Earthing Sticks for Switchgear Installations

Earthing stick used for attaching an earthing and short-circuiting device to an installation.

- For attaching earthing and short-circuiting devices
- Available in different lengths
- Modular for easy transport
- Light-weight construction
- Hexagon shaft (WS 19 mm) or T pin shaft

General technical data:

Standard	T pin shaft DIN 48087
Temperature range	-25 °C ... +55 °C
Material (insulating tube)	Glass-fibre reinforced polyester tube
End fitting	Non-slip plastic cap or plug-in coupling for extending the handle

Earthing sticks with bayonet locking mechanism (T pin shaft) can also be used for clamps with hexagon shaft by attaching an AES SQ SK adapter.

The plug-in coupling allows for easy handle extension of ES STK earthing sticks.

Earthing sticks are hand-held insulating sticks for approaching clamps of earthing and short-circuiting devices to parts of electrical installations for earthing and short-circuiting purposes. They consist of an insulating element, black ring, handle and coupling for attaching clamps. Earthing sticks have to be selected according to the **weight** of the earthing and short-circuiting device.

The **insulating element** is the part of the earthing stick between the black ring and the end of the earthing stick in the direction of the clamp. It ensures that the user maintains the required safety distance and provides sufficient insulation. In installations exceeding 1 kV, the insulating element must have a minimum length of 500 mm.

Earthing Sticks for Overhead Lines

Telescopic earthing stick with aluminium cone coupling and phase screw clamp.

- For outdoor use
- Robust aluminium cone coupling
- Total lengths up to 6000 mm
- Telescopic stick, length continuously adjustable by star knob
- For phase screw clamps and clamps with long T pin shaft

General technical data:

Temperature range	-25 °C ... +55 °C
Material (insulating tube)	Glass-fibre reinforced polyester tube
Material (threaded coupling, star knob)	Aluminium alloy
End fitting	Aluminium/rubber eye / Plug-in coupling for extending the handle

Robust aluminium threaded coupling allows positive and non-positive connection due to the screw connection and gearing.

End fitting with eye (Al/rubber) or plug-in coupling with eye (Al/rubber) for extending the handle.

A square tube (26 mm) can be pulled out of the round insulating tube and can be fixed in any position between l_{min} and l_{max} using the star knob.

Lockable adjusting ring:

- The adjusting ring on the cone has the following functions:
- Position "AUF" (= OPEN): Stick can be removed after the clamp has been attached
- Position "ZU" (= CLOSED): Stick and clamp remain coupled even after the earthing and short-circuiting device has been attached

Permissible loads for the earthing sticks:

Length l _G	No.	Max. load on the operating head
6000 mm	1+2+2+3	3.5 kg
4500 mm	1+2+3	10 kg
3000 mm	1+3	10 kg

Diameter	43 mm

Multi-part, intermediate section

With aluminium threaded coupling, connector with nut and bushing.

Type	EST ZS 1500
Part No.	769 504
Total length (l _G)	1580 mm
Diameter	43 mm

Multi-part, end fitting

With connector and nut of the aluminium threaded coupling and end fitting with ring eye.

Type	EST ES 1500
Part No.	769 505
Total length (l _G)	1590 mm
Diameter	43 mm

Accessories for Earthing Sticks for Overhead Lines

Adapter (T pin shaft / long T pin shaft)

Suitable for insertion into earthing sticks with aluminium cone coupling for T pin shafts (bayonet locking mechanism) to accept clamps with T pin shaft. The lock nut allows to fix the adapter on the earthing stick.

EaS Configurator: Easy online configuration

You will find the EaS configurator at de.hn/4T1Uq

- Easy online selection of the suitable EaS device
- Unique laser marking of the EaS device
- Individual configuration
- Permanent plausibility check in the background
- User-friendly interface
- To start the configuration, simply enter the Variant No., Part No. or Product configuration

General technical data:

Standard	EN/IEC 61138 (DIN VDE 0283-3) and EN/IEC 61230 (DIN VDE 0683-100)
Temperature range	-25 °C ... +55 °C
Material (cable)	Al, flexible; E-Cu, extra finely stranded and highly flexible
Material (sheath)	Thermoplastic (soft PVC compound YM2)
Hole (terminal lug)	Ø12.5 mm

Earthing and short-circuiting devices (EaS) for switchgear installations and overhead line application can be individually configured online on the DEHN homepage.

The configurator provides you with two options to start the configuration (product or system view).

The product view is ideally suited for users who know exactly what they need and already have a concrete idea of, for example, the cable cross-section and clamps to be used.

As an alternative, the system view can be selected. For this extended version of the product view, information on the installation must be provided.

The application location of the EaS device determines which clamps are ultimately available for selection. A distinction is made here between switchgear installations and overhead line systems.

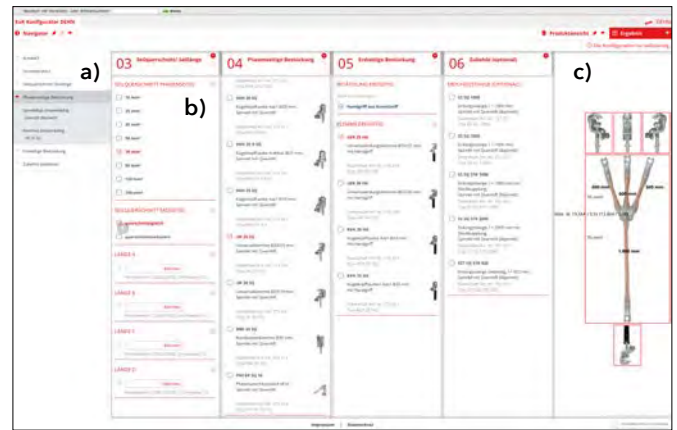

A permanent plausibility check ensures reliable selection of the right device. Further accessories such as earthing sticks are optionally displayed for the configured EaS devices.

At the end of the configuration the result is shown graphically and in a detailed description. In addition, a unique Variant No. is assigned to the application-specific earthing and short-circuiting device, which is lasered on the device later.

The EaS configurator is graphically divided into three parts:

- On the left, the modular features are displayed in a tree structure. The selection history is shown, and you can jump back to it at any time and change properties that have already been selected. The tree structure allows a clearly structured configuration.
- In the centre you can select or change the required information via the keyboard or mouse. This usually happens "step by step", i.e. only after a property has been evaluated is the next characteristic "visible" and selectable.
- On the right, the current status is graphically displayed in an active visualisation in order to support and simplify the right selection. Here too, data can be entered in the relevant fields.

Short-Circuiting Bar

Short-circuiting bar with earthing cable on a switchgear installation.

- Simply compile the right short circuit bar online
- Individual configuration
- Permanent plausibility check in the background
- With longitudinal slot for reliable contact
- High short-circuit current strength up to max. 130 kA / 0.5 s for low-voltage systems (LV) and 80 kA / 0.5 s for medium-voltage systems (MV)
- For use with earthing sticks for hexagon or T pin shafts
- Short-circuiting bar and earthing cable lengths can be selected online via the earthing and short-circuiting configurator

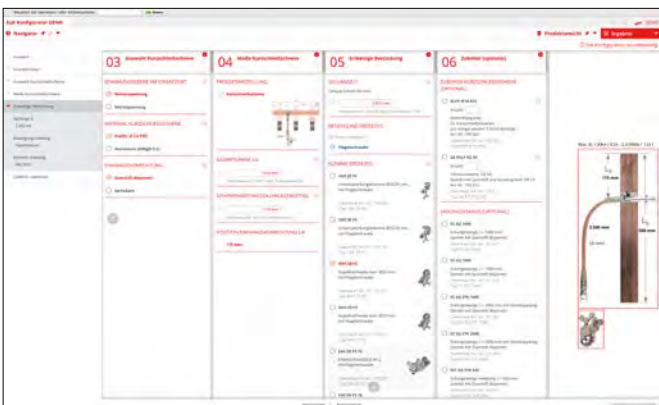

In order to connect the earthing cable to the earthing system, it is fitted with a rigid ball head cap with a wing bolt for fixed ball points (Ø20 mm) (Part No. 772 312 (type KKH 20 FS)). Other equipment or cable lengths can be selected online via the earthing and short-circuiting configurator. Short-circuiting bars are available with two different coupling mechanisms for earthing sticks:

SK: Hexagon shaft.

SQ: T pin shaft (bayonet locking mechanism).

You will find the EaS configurator at: de.hn/8C6wt

Earthing and Short-Circuiting Devices for Crane Conductor Bars

Three-pole earthing and short-circuiting device with screw clamps.

With screw clamps

- For insulated or bare conductor bars of cranes and lifting equipment
- Allows to lock the clamping range of the clamps in several positions
- Waterproof, plastic-sheathed cable entries and node unit, with additional ant-kink protection
- Other cable lengths can be selected online via the earthing and short-circuiting configurator

MicroΩmeter LoRe EaS

MicroΩmeter LoRe EaS

- Mobile measuring system for performing technical tests on portable earthing and short-circuiting devices (EaS) at regular intervals
- For determining minimum ohmic resistances of earthing and short-circuiting devices and the quality of electrical connections e.g. conductor rails or switch contacts
- Electronic transfer of measured values to the evaluation software via USB interface
- Software-aided procedure and automatic documentation of results
- Acoustic signal as soon as the limit values are exceeded
- Calibrated when delivered
- Software update via USB interface

Insulating Protective Shutters

Inserting a protective shutter of type A4 into a closed system.

According to the five safety rules, adjacent parts are parts situated in the vicinity zone. If parts of an installation near the work location cannot be disconnected, additional safety measures must be taken before starting work as is the case with work in the vicinity of live parts.

Insulating protective shutters according to DIN VDE 0682-522 are used to provide protection against accidental contact with live parts of an installation. They are portable and inserted under live conditions by hand or by using an operating stick. Insulating protective shutters are designed for short-term use in indoor electrical installations according to DIN VDE 0101 with voltages from 1 to 36 kV a.c. at nominal frequencies below 100 Hz to provide protection against direct contact according to DIN VDE 0105-100 when working in the vicinity of live parts. When used in medium-voltage installations, insulating protective shutters might have to be adapted, for example if it is not possible to insert shutters in the live working zone without risk due to unfavourably located drives, switch components or isolating plates. In such cases, a standard-compliant solution can be found by cutting out parts of the insulating protective shutter or cutting it to size. For that purpose, technical details must be provided. We have developed a special template for insulating protective shutters which can be used, for example, to mark the exact location of cut-outs.

For enquiries and orders, please fill in the template on our website www.dehn-international.com.

Note

Insulating protective shutters do not protect against re-connection. The protected area is the area which is separated from the area containing live parts by the insulating protective shutter. The minimum distances shown in the above table between shutters / shutter edges and live parts must be observed. The protective part (with length l_s and, if required, height h_s) of insulating protective shutters is the part that provides protection against accidental contact with live parts. It is fitted with either a handle or a coupling for attaching an operating stick.

Outside the live working zone, the following gaps are permissible between shutter edge and cell wall:

- Up to 10 mm without restriction
- Up to 40 mm, if the distance between the shutter edge and the live working zone is at least 100 mm
- Up to 100 mm near a switch subconstruction

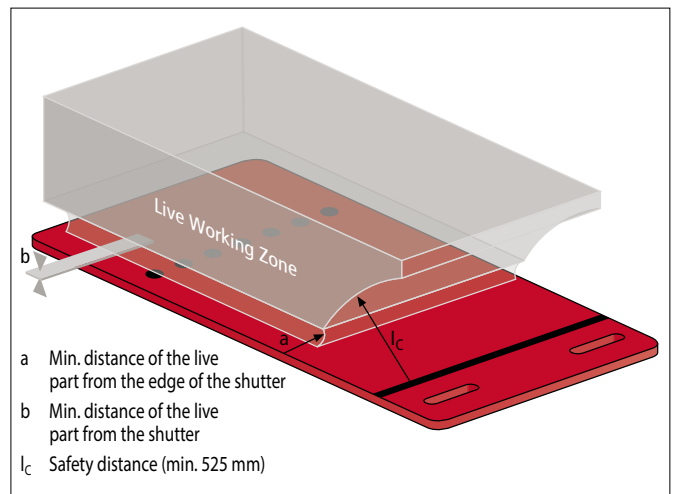

Rated voltages from 1 to 36 kV

- Protection against accidental contact with live parts of installations with rated voltages from 1 kV to 36 kV
- Four different designs for use in almost all types of switchgear installations

General technical data:

Standard	DIN VDE 0682-522
For	Use in indoor installations only

Example of a live working zone in case of an insulating protective shutter of type A1.

Rated voltage	Minimum distance of the live part	
	from shutter edge a	from shutter b
U_r		
3.6 kV	60 mm	0 mm
7.2 kV	90 mm	0 mm
12.0 kV	120 mm	20 mm
24.0 kV	220 mm	60 mm
36.0 kV	320 mm	100 mm

Due to the various designs of switchgear installations, DIN VDE 0682-552 defines four different basic types of protective shutters:

A1, safety distance provides protection during inserting and removing insulating protective shutters.

A2, protective section provides protection during inserting and removing insulating protective shutters.

A3, operating stick provides protection during inserting and removing insulating protective shutters.

A4, protective device installed in the installation provides protection during inserting and removing insulating protective shutters.

DEHNproX - Safe working on electrical installations / Live working

- 8 Insulating element of the operating stick with length l_I

- l_G Total length of the operating stick
- l_0 Length of the top section of the operating stick
- l_H Length of the handle of the operating stick
- l_I Length of the insulating element of the operating stick
- l_s Length of the protective section
- l_c Safety distance
- a Minimum distance of live parts from the edge of the insulating protective shutter
- b Minimum distance of live parts from the insulating protective shutter

Type A1

With finger holes, guide and limit mark for inserting and removing insulating protective shutters into / from guide rails by hand.

The guide mark is a dotted line with a minimum distance of 525 mm from the rear shutter edge. The section beyond this mark must not be contacted when inserting the insulating protective shutter. The limit mark is a continuous line and separates the handle from the protective section. The section beyond this mark must not be contacted when inserting the insulating protective shutter and must be at least 525 mm away from live parts when the shutter has been inserted.

Type ISP 36 PVC ...	A1...
Part No.	763 211
Rated voltage (U _r)	Up to 36 kV
Material	Rigid PVC

Type A3

With retaining device with bayonet pin for inserting and removing insulating protective shutters into / from guide rails using an operating stick.

This shutter type is also available with a longitudinal slot and a retaining device (rotatable shutter). In this case, the shutter is operated using an operating stick with switching stick head.

Two persons are required to insert / remove shutter sizes exceeding 1 m². For this purpose, two retaining devices for attaching operating sticks are required. Moreover, insulating protective shutters are also available with rolls.

Type ISP 36 PVC ...	A3...
Part No.	763 231
Rated voltage (U _r)	Up to 36 kV
Material	Rigid PVC

Type A2

With 90° angled handle and hand grips for inserting or removing insulating protective shutters into / from guide rails by hand. Other angled handles (70° to 270°) are available on request.

The height of the handle has to be selected in such a way that live parts of the installation above the shutter are completely covered.

Type ISP 36 PVC ...	A2...
Part No.	763 221
Rated voltage (U _r)	Up to 36 kV
Material	Rigid PVC

Type A4

With finger holes (without additional marks) for use in factory assembled switchgear panels. Instead of finger holes, the shutters are also available with a grip (minimum height: 35 mm).

The shutter is inserted through a slot into the closed installation.

The protective device of the installation must ensure full protection when inserting and removing the shutter. In type-tested switchgear installations in accordance with DIN VDE 0670-6 and 7 or EN/IEC 62271-200 (DIN VDE 0671-200), insulating protective shutters may only be used in consultation with the manufacturer of the switchgear installation.

Permanent availability of electricity has become a decisive factor in international competition.

At the same time, increasing cost pressure in the energy supply sector means that less and less redundancy is being made available in the power supply. First of all, this requires increased operational reliability of existing plants, and secondly, it is not always possible to disconnect entire plant sections for the necessary maintenance and servicing work. Live working offers an alternative. DEHN has experience in this method of working and has developed products that can be found in the DELTEC product range.

Disconnecting installations for maintenance work

Electrical equipment and low, medium and high-voltage systems such as overhead lines, transformer substations, switchgear installations, distribution boards, transformer cells or cable distribution cabinets cannot be disconnected or can only be disconnected with great effort due to undesired downtimes or cost-intensive work on Sundays and public holidays.

Live cleaning

Clean installations increase system reliability

In case of adverse weather conditions (moisture), arc exposure may occur as a result of soiled installations, dust layers and residue from lubricants on insulators and cable sealing ends in medium-voltage installations, cobwebs and weeds in cable distribution boards as well as dust and lubricant layers in low-voltage installations, resulting in power failure, damage to the equipment and even injury or death.

Regular cleaning intervals

Surveys have shown that, depending on the type and degree of soiling, cleaning work on open indoor systems and cable distribution cabinets is required at regular intervals of between roughly six months and two years.

Dry cleaning by suction combined with damp cleaning

Dry cleaning work is performed by suction with operating heads or by brushing soiled parts of the installation while simultaneously sucking the dirt away. Loose dust layers and cobwebs are quickly and easily vacuumed away. In the case of oily and stubborn deposits, wet cleaning with sponges moistened with special insulating cleaning fluid has the desired cleaning effect. The work is carried out according to the live working procedure "hot stick working".

Dry suction cleaning equipment

Suction cleaning equipment consists of a cleaning head (operating heads, brushes), intake tube with handle, extension, intake hose and suction device. All individual parts are made of plastic and are fully insulated. The shape of the brushes and operating heads is largely adapted to the parts of installations to be cleaned. The special plug-in coupling system of the dry cleaning equipment prevents accidental use of accessories not intended for this application (e.g. industrial vacuum cleaner accessories).

Requirements on the suction device

The suction device used must meet the following requirements:

- The industrial suction cleaner must have a minimum air velocity of 20 m/s and a visual indication of the intake capacity.
- The intake hose must have a continuous inner diameter ≥ 30 mm and be free of metal parts.

Damp cleaning equipment

Damp cleaning equipment consists of special cleaning heads (sponge holders), an insulating stick with handle and extension elements. All individual parts are fully insulated. The plug-in system of operating heads and sponges allows easy and fast replacement of dirty sponges. Only approved sponges may be used for this purpose.

Requirements on installers

Selection of electrically skilled persons for live working

Maintenance and repair work may only be carried out by electrically skilled persons with several years of experience in operating or maintaining electrical installations who have also successfully completed a special training course for such work. During this training, both basic theoretical knowledge and practical skills (training of individual work processes) are taught.

Training as live worker

The training as a specialised live worker is based on detailed target descriptions as required by the German trade association BG ETEM "Live working on electrical installations and equipment", DGUV regulation 103-011 (previously BGR A3). It includes theoretical and practical training for the electrically skilled person and ends after a performance test with the presentation of a "live working" certificate.

"Live working" procedure

During hot stick working, the worker keeps a predefined distance from live parts of the installation and uses insulating sticks/operating sticks.

TRS NS Dry Cleaning Kit

Live cleaning of a low-voltage switchgear installation using the TRS NS dry cleaning kit.

Nominal voltages up to 1000 V / 15 ... 60 Hz

- For indoor and outdoor installations
- Equipment for suction cleaning under live conditions
- For dry cleaning of cable distribution cabinets, open indoor installations and control cabinets
- Specially adapted operating heads for intensive cleaning
- Plug-in coupling system allows fast replacement of operating heads
- Regulation of intake air in the handle area

General technical data:

Standard	Based on DIN VDE 0682-621
Not for use in wet weather conditions	☀

Requirements

Cleaning work up to 1000 V generally is allowed to be done under supervision of a qualified electrician according to EN 50110-1 "Operation of electrical installations" and is allowed to be done in accordance with the national accident prevention regulations (UVV) "Elektrische Anlagen und Betriebsmittel" [Electrical installations and equipment] stipulated by the German Employer's Liability Association for the energy, textile, electrical and media product sector (BG ETEM) under observation of DGUV regulation 3 (previously BGV A3).

FRS ZK MS Damp Cleaning Kit

Damp cleaning of a transformer using the FRS ZK MS damp cleaning kit.

Nominal voltages up to 36 kV / 15 ... 60 Hz

- For indoor and outdoor installations
- Damp cleaning equipment for use under live conditions with special cleaning liquid
- Universal gear coupling for replacing and adjusting the angle of operating heads
- Rigid and flexible plug-in operating heads allow fast and easy replacement of the sponges

General technical data:

Standard	Based on DIN VDE 0681-1 and DIN VDE 0682-621
Standard (universal gear coupling)	EN/IEC 60832 (DIN VDE 0682-211)
Not for use in wet weather conditions	☀

Application

Damp sponges allow to remove tough pollution layers and to clean oily transformer surfaces. Special insulating cleaning liquids (e.g. Rivolta SLX 500; SLX TOP or SLX Super from Bremer & Leguil, Duisburg/Germany, and Florin 2000 from Flore, Koblenz/Germany) must be selected according to the rated voltage of the installation and the environmental conditions.

Requirements

Cleaning work from 1 to 36 kV must be carried out under supervision of a qualified electrician according to EN 50110-1 "Operation of electrical installations - Minimum Requirements", observing clauses 6.3.1 to 6.3.12. In Germany FRS ZK MS damp cleaning kits are subject to DGUV Vorschrift 3 (former BGV A3) and DGUV Regel 103-011 (former BGR A3) of the national accident prevention regulations (UVV) "Elektrische Anlagen und Betriebsmittel" [Electrical installations and equipment] stipulated by the German Employer's Liability Association for the energy, textile, electrical and media product sector (BG ETEM).

Safety shoes with insulating soles up to 1000 V

Safety shoes are an important part of personal protective equipment.

- Safety shoes and boots for electricians
- Insulating outsole for up to 1,000 V
- Certified according to PPE regulation (EU) 2016/425

General technical data:	
Standard	EN ISO 20345:2011
Material	Leather
Lining	Textile
Classification as per EN ISO 20345:2011	Class I
Protection class as per EN ISO 20345:2011	SB
Protective cap	Plastic
Sealed with	Shoelaces
Sole type	Polyurethane
Penetration protection	Composite textile material
Metal-free equipment	Yes
Colour	Black / orange
Application	Electrical engineering
Special properties: The outsole provides electrical insulation at voltages up to 1,000 V - MΩ > 1,000 if requirements are met (no moisture, does not refer to the upper shaft).	
Electrical resistance acc. Canadian standard CSA Z 195 14 Increase by 1 kV/sec - Voltage 20,000 V / 60 Hz duration of 1 minute. Electrical resistance acc. the ASTM 2413-11 standard increase of 1 kV/sec - Voltage 20,000 V / 60 Hz duration of 1 minute. Requirement of electric flow lower than 1.0 mA.

High-pressure resistant.
Water-repellent.
Comfortable.

A lot of people think "it's only water". True, but at high pressure, water can have devastating consequences for employees who use high-pressure water jets to clean surfaces and equipment.

From 250 bar, you definitely need more than just basic protection against moisture (DGUV 100-500). This is because water jets emitted at high pressure have a dangerous cutting effect. Serious and even fatal injuries can result if the body is hit unprotected.

The DEHNcare WJP protective clothing protects your employees during high-pressure cleaning with water jets up to 1000 bar.

Reliable protection when working with high-pressure water jets up to 1000 bar

Working with high-pressure water jets, represents a special hazard for workers. To prevent accidents caused by the enormous penetrating power of the water, DEHN has developed a protective overall made of a special material mix.

Extra protection for vulnerable parts of the body

In addition to the proven DEHNcare WJP Advanced protective overall, further WJP protective clothing components to protect those parts of the body that are particularly exposed to high-pressure water jets are now available.

Branding Service

3 good reasons for branding your protective overalls:

- Build brand awareness by displaying your logo and company name on the protective overall.
- Motivate your employees by providing them with their own personal protective overall – with their name on it.
- Present yourself as a service company equipped with high-quality PPE. This gives your client a sense of security and stimulates trust.

Your logo could be here!

The branding service is available for orders of 10 or more protective overalls. Simply get in touch with us.

Reliable protection in many branches

In industrial plants, for concrete refurbishment, in commercial construction ...

This overall, made of a newly developed material mix, offers protection when cleaning with high-pressure water jets in a wide variety of applications, e.g.:

- Cleaning industrial plants
- Cleaning public spaces
- Stripping metal surfaces, e.g. bridges or monuments
- Cleaning machines and vehicles, e.g. in the commercial construction sector, agriculture, and the transport industry
- Concrete cleaning and refurbishment

DEHNcare WJP (Water Jet Protection) is the first protective overall against high-pressure water jets tested and certified according to GSIFA- P15 principles for testing and certifying personal protective equipment (PPE) and to the new EU regulation 2016/425.

Prevention of cuts and lacerations - one worry less!

Safety bonus

The protective overall has been tested at up to 1,000 bars and is resistant to high pressure. Increased protection against abrasions and cuts, in the particularly endangered areas, on the arms, legs and knees.

A true lightweight

The overall only weighs 2.3 kg and is therefore especially light. You have freedom of movement and mobility whatever the job.

Untroubled work

The 2-layer composite material is watertight and cut-resistant yet still breathable. For a high degree of comfort.

Soon ready for use again

The overall can be washed at 60 degrees or dry cleaned. Conserve environmental resources: The overall is reusable, so you need fewer disposable ones.

DEHNcare WJP Protective Overall "Advanced"

"Advanced" protective overall for working with high-pressure water jets.

- High-pressure resistant up to 1000 bar (tested with flat-jet nozzle based on test principle GS-IFA-P15)
- Completely waterproof - including the seams
- Breathable, thus comfortable to wear
- Great freedom of movement due to especially light material
- Environmentally friendly - washable up to 60°
- Certified according to PPE regulation (EU) 2016/425

DEHNshort -
Arc fault protection system

Safe when it matters most

The importance of arc fault protection is highly relevant for switchgear manufacturers and operators because arc faults in low-voltage switchgear installations pose an existential threat to people and equipment. As the operator of electrical installations, you are obliged to take suitable

technical protection measures to protect employees in accordance with occupational health and safety legislation.

In addition to occupational safety, availability requirements, and thus system protection, must be evaluated when planning an electrical power distribution system.

Active arc fault protection systems in low-voltage switchgear installations are increasingly becoming established in all relevant regulations and have long since been regarded as state of the art. Your will receive comprehensive support during the planning process. Feel free to contact us.

DEHNshort - Active Arc Fault Protection System

Active arc fault protection system DEHNshort in a switchgear cabinet..

- Protection of persons and installations and system functions in accordance with DIN EN 61439-2, Suppl. 1 (IEC/TR 61641 ed. 3, 2014)
- Use in low-voltage switchgear and controlgear assemblies according to DIN EN 61439-2 after integration tests according to DIN VDE 0660-600-2-1, 2021 (IEC TS 63107: 2020)
- Maximum system availability
- Modular system structure
- System status is indicated at the front of the installation

General technical data:

DEHNshort offers optimum protection for persons and switchgear installations against the effects of an arc fault. To ensure this, particularly short response times are required in energy-intensive switchgear installations. A few milliseconds decide the extent of the effects of an arc fault. DEHNshort is a system that detects the arc fault immediately after ignition, evaluates the recorded sensor signals and quenches the arc fault by generating a three-phase bolted short-circuit.

Functional principle:

Detect

In all feeders, protective current transformers positioned upstream of the feeding circuit breakers detect the overcurrent associated with the arc fault. As a second detection variable, special light sensors detect the extremely bright light of the arc fault. Depending on system requirements, the light sensors are available as a point sensor or fibre-optic sensor.

Evaluate

Electronic detection devices link the sensor signals and activate the quenching devices of the relevant busbar as well as the shunt releases of all feeder circuit breakers in the event of both detection variables appearing.

Quench

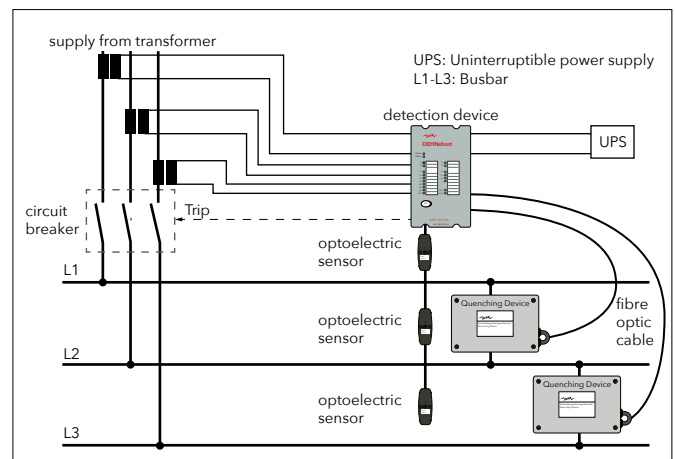

By activating the quenching devices, a bolted short-circuit is created in parallel to the arc fault in a very short time. Due to this low-resistance bypass, the voltage collapses and the arc fault is immediately quenched. The thyristors that short-circuit the three phases of the busbar immediately after activation of the quenching devices should be explicitly mentioned in this context. Subsequently, a contact device driven by a spring takes over the channelling of the short-circuit current until it is disconnected by the feeding circuit breakers.

Disconnect completely

To ensure that the switchgear installation is not loaded with the short-circuit current for longer than necessary - and to ensure additional safety - all feeder circuit breakers receive a disconnection command via floating contacts on the respective shunt releases. This disconnects the arcing busbar section from the mains.

Restoration of service

After rectifying the original fault, replacing the quenching devices and carrying out an insulation test, the system can be put back into operation within a very short time. The arc fault protection realised in this way is considerably higher than the requirements of test criteria 1-7 from DIN EN 61439-2, Suppl. 1 (IEC TR 61641 ed3 of 2014). DEHNshort is used wherever there is a high demand for the protection of people and availability of the electrical power supply.

Safe working on electric railways

In modern rail technology, safety is of paramount importance. The DEHN safety equipment portfolio offers you tools and equipment, including protective and auxiliary equipment, for working in accordance with the five safety rules in the areas of electrified track systems and electrical supply

systems. In this chapter you will find our solutions for safe working on overhead contact lines, substations, switchgear installations, for frequencies of 50 or 16.7 Hz or for DC systems.

Be it a wireless inspection camera or voltage detector, or telescopic earthing sticks and earthing and short-circuiting devices for railway earthing. All DEHN products have been tried and tested over many years and are as a rule approved by Deutsche Bahn with material and drawing numbers.

German Social Accident Insurance (DGUV) Regulation 3 (formerly accident prevention regulations (BGV A3))

Operating sticks, voltage detectors and EaS devices must be checked according to the DGUV regulation 3 (previously BGV A3) to ensure that they are in good condition and comply with the limit values as specified in the electrotechnical rules. This test is carried out in the high-voltage test laboratory at DEHN and includes, among other things:

- Testing the discharge current
- Testing the protection against bridging
- Testing by visual inspection, manual test and measuring
- Measurement of the total resistance on EaS devices
- Measurement of the relative change in resistance on EaS devices

The maintenance test is documented in a test report and on the device itself.

The intervals for maintenance tests depend on the conditions of use, e.g. frequency of use, stress due to environmental conditions and transport, etc, however, according to DGUV regulation 3, **at least every 6 years**.

Ice Removal Rod

Removing icicles on a tunnel entrance.

Nominal voltages up to 25 kV

5	Rigid adapter gear coupling	ADS ZK 185

Type	SET DIGIK AC2
Part No.	766 480 ^{NEW}
Nominal voltage (U _N)	up to 150 kV
Frequency	15-60 Hz
Resolution	12 megapixels
Objective	Ultra-wide angle (155° field of view)
Digital zoom	4x
sensor	1/1.7" 4K CMOS sensor
Image stabiliser	Electronic
Formats	JPEG/RAW and MP4
Internal memory	22 GB
Ext. SD card	microSD (max. 256 GB) *)
Equipment	Remote control via app
Voice command	Yes
Interfaces	USB type-C
Dimensions (case)	395 x 290 x 105 mm

*) Handle, insulating sticks and micro SD card are not included.

Macro lens

For close-ups

Type	MO DIGIK AC2
Part No.	766 483 ^{NEW}
Dimensions	40 x 40 x 10 mm

Accessories for wireless Inspection Camera

Operating stick set

Set for animal guard adapter and wireless inspection camera.

Type	ASSN 36 STK ZK
Part No.	766 380
Nominal voltage (U _N)	1 ... 36 kV
Max. total length (l _{G,max})	6780 mm
DB drawing No.	3 Egbw 04.61

Accessories for Operating sticks

Installation of the "animal guard" with the help of an adapter to protect birds and small animals.

Adapter for animal guard

Adapter with gear coupling for mounting the 3M Animal Guard.

Type	AD ZK 3M 170
Part No.	766 059
Total length (l _G)	170 mm
DB drawing No.	Egbw 04.71

Insulating Stick Kit for Cleaning the Windscreens of Electric Locomotives

Insulating stick kit used for cleaning the windscreen of an electric locomotive.

Nominal voltages up to 7.5 kV / d.c. and 25 kV / a.c.v

- For cleaning the windscreens of electric locomotives
- Protection against accidental contact with live parts (e.g. overhead contact lines)
- Adjustable inclination angle of the operating head

General technical data:

Standard	Wet test in accordance with EN/IEC 61243-1 (DIN VDE 0682-411)
For use in wet weather conditions	
Material (insulating tube)	Glass-fibre reinforced polyester tube
End fitting	Non-slip plastic cap

Insulating Stick Kit for Cleaning Windscreens

Type	IS 25 ZK RK 3160
Part No.	766 340
Nominal voltage U _N a.c.	Up to 25 kV
Nominal voltage U _N d.c.	Up to 7.5 kV
Total length (l _G)	3160 mm
Insertion depth (l ₀)	1630 mm

Adapter with gear coupling for attaching the cleaning head.

The hook-and-loop fastener allows fast replacement of the cleaning pad.

The universal gear coupling can be adjusted from 0° to 90° in 30° increments.

Note:

In accordance with EN/IEC 61243-1 (DIN VDE 0682-411), IS 25 ZK 2885 insulating sticks and AD ZK 25 200 adapters can also be used in wet weather conditions for nominal voltages up to 7.5 kV d.c. and 25 kV a.c. The cleaning agent must not exceed the maximum conductivity of 1000 µS / cm. Due to the risk of bridging, water and cleaning agents must not be used to clean live parts of installations.

Spare Parts for Insulating Stick Kit

Cleaning head

Flexibly adjustable, for attaching cleaning pads.

Type	RK 230 100 AS25
Part No.	766 056
Dimensions	230 x 100 mm
Diameter	25 mm

Rectangular cleaning pad

Type	RP 250 115 20
Part No.	766 057
Dimensions	250 x 115 x 20 mm
PU	10 pc(s)

Voltage detectors for overhead contact line systems

PHE Voltage Detector Kit

PHE voltage detector with visual indicator used on an overhead contact line of German Railways (DB).

General Information:	
Standard	DIN VDE 0681-6
For use in wet weather conditions	
Indication	Visual
Self-testing element	Yes
Material (test electrode)	St/gal Zn
Material (test prod)	Glass-fibre reinforced polyester tube
Material (indicator)	Plastic, fully insulated

Nominal voltage 15 kV / 16.7 Hz

Easy and safe testing

- For overhead contact lines of electric railways
- Cost-effective / space-saving transport
- Easy to use due to simple plug-in system

Nominal Voltage 15 kV / 16.7 Hz

Detachable (four elements).

Type PHE 15 16.7 ...	4T TA
Part No.	766 616
Nominal voltage (U _N)	15 kV
Frequency	16.7 Hz
Total length (l _G)	4890 mm
Insertion depth (l _O)	1675 mm
DB drawing No.	3 Ebgw 02.51
DB material No.	237 129

Nominal Voltage 15 kV / 16.7 Hz
(for Transport in Motor Vehicles)

Detachable (six elements).

Type PHE 15 16.7 ...	6T TA
Part No.	766 617
Nominal voltage (U _N)	15 kV
Frequency	16.7 Hz
Total length (l _G)	4900 mm
Insertion depth (l _O)	1675 mm
DB drawing No.	3 Ebgw 02.53
DB material No.	652 975

Two-part test prod with robust threaded coupling (six-part kit for transport in motor vehicles).

Volt. detec. f. overhead contact line systems

PHE III Voltage Detector

Nominal voltages up to 25 kV / 50 Hz
Safe verification of isolation from supply voltage

- Reliable indication
- Easy to use
- Cost-effective / space-saving transport

General technical data:	
Standard	EN/IEC 61243-1 (DIN VDE 0682-411)
Temperature range	-25 °C ... +55 °C, climatic category N
Design	Complete
For use in wet weather conditions	
For	Indoor and outdoor installations
Indication	Acoustic and visual
Self-testing element	Yes
Material (test electrode)	Copper alloy/gal Sn
Material (test prod)	Glass-fibre reinforced epoxy resin tube
Material (indicator)	Plastic, fully insulated
Material (insulating stick)	Glass-fibre reinforced polyester tube

Nominal Voltages up to 25 kV / 50 Hz

For the overhead contact lines of electric railways.
Category "S" for single-ended monophas systems.

Type	PHE3 25 S 50 1P
Part No.	767 125
Nominal voltage (U _N)	25 kV
Total length (l _G)	1680 mm
Insertion depth (l _O)	880 mm

Voltage detectors for switching stations

PHE4 Voltage Detector Medium Voltage

- Self-test of all live parts including test prod
- Unique plug-in coupling system
- Integrated visual and acoustic indication
- Also for use in wet weather conditions

General technical data:	
Standard	EN/IEC 61243-1 (DIN VDE 0682-411)
Temperature range	-25 °C ... +70 °C, climatic category N and W
Design	Complete

For	Indoor and outdoor installations
Indication	Acoustic and visual
Self-testing element	Yes
Material (test electrode)	Cu alloy/gal Sn
Material (test prod)	Glass-fibre reinforced epoxy resin tube
Material (indicator)	Plastic, fully insulated
Material (insulating stick)	Glass-fibre reinforced polyester tube

Nominal Voltage up to 20 kV / 50 Hz or 16.7 Hz, switchable

Category "S" for switchgear installations and overhead lines.

Type PHE4 ...	U 6 20 S 16.7 50
Part No.	783 430
Nominal voltage (U _N)	6 ... 20 kV
Frequency	50 / 16.7 Hz
Total length (l _G)	1600 mm
Insertion depth (l _O)	800 mm

^{*)} all circuits including test prod

Nominal Voltage up to 20 kV / 16.7 Hz, M12 Thread

Category "S" for switchgear installations and overhead lines.

Type PHE4 ...	6 20 S 16.7
Part No.	783 420
Nominal voltage (U _N)	6 ... 20 kV
Frequency	16.7 Hz
Total length (l _G)	1600 mm
Insertion depth (l _O)	800 mm

Voltage detectors for switching stations

PHE Voltage Detector

PHE voltage detector with visual indication.

Nominal voltages up to 20 kV / 50 Hz or 16.7 Hz
Easy and safe testing

- Reliable indication
- Easy to use

General Information:

Standard	EN/IEC 61243-1 (DIN VDE 0682-411) and DIN VDE V 0682-421
Temperature range	-25 °C ... +55 °C, climatic category N
Design	Complete
For use in wet weather conditions	
For	Indoor and outdoor installations
Indication	Visual
Self-testing element	Yes
Material (test electrode)	Copper alloy/gal Sn
Material (test prod)	Glass-fibre reinforced epoxy resin tube
Material (indicator)	Plastic, fully insulated
Material (insulating stick)	Glass-fibre reinforced polyester tube

Nominal Voltage Ranges up to 20 kV / 16.7 Hz

For single-ended monophasic switchgear installations and point heating systems.

Type PHE ...	6 20 S 16.7 1P
Part No.	767 415
Nominal voltage (U _N)	6 ... 20 kV
Frequency	16.7 Hz
Total length (l _G)	1560 mm
Insertion depth (l _O)	770 mm
DB drawing No.	3 Ebgw 02.52
DB material No.	738 302

Nominal Voltage Ranges
20 kV / 50 Hz or 16.7 Hz,
switchable

For three-phase systems and single-ended monophasic installations.

Special features of the switchable voltage detector:

The selector switch can be moved into three positions for the relevant voltage and frequency ranges:

- 3 ... 10 kV / 50 Hz - three-phase systems
- 6 ... 20 kV / 50 Hz - three-phase systems
- 6 ... 20 kV / 16.7 Hz - single-ended monophasic systems

For safety reasons, the detector can only be switched on if the selector switch is switched to the most sensitive range of 3 kV to 10 kV / 50 Hz. The switch snaps into the relevant position and provides protection against accidental switching.

A magnetically operated, wear-resistant reed switch changes the switching position.

Type PHE ...	3 20 S FU 1P
Part No.	767 416
Nominal voltage (U _N)	3 ... 20 kV
Frequency	16.7 and 50 Hz
Total length (l _G)	1560 mm
Insertion depth (l _O)	770 mm
DB drawing No.	3 Ebgw 02.54
DB material No.	743 361

Voltage detectors for traction power lines

Nominal Voltage 15 kV / 16.7 Hz

For traction power lines. Hook-shaped electrode and end fitting with plug-in coupling and non-slip eye included.

Use for traction power lines

Voltage detectors for traction power lines have a shorter extension than voltage detectors for overhead contact lines. To ensure reliable indication, the PHE 15 16.7 BEL STK voltage detector may only be used for traction power lines and not for other components of overhead contact lines. Moreover, it must not be used from ladder trolleys for overhead contact lines. Traction power lines are supply lines, line feeders, bypass lines, connecting lines, feeder lines, 15 kV cables, cable sealing ends, switch lines and transverse switch lines.

Type PHE ...	15 16.7 BEL STK
Part No.	767 413
Nominal voltage (U _N)	15 kV
Frequency	16.7 Hz
Total length (l _G)	1645 mm
Insertion depth (l _O)	765 mm
DB drawing No.	3 Ebgw 02.55
DB material No.	964 851

Voltage detectors for outdoor switching stations

PHE III Voltage Detector Kit

PHE III voltage detector used on a 110 kV outdoor station.

Nominal voltages up to 110 ... 132 kV / 50 and 16.7 Hz and 66 kV / 16.7 Hz

Safe verification of isolation from supply voltage

- Reliable indication
- Easy to use
- Multi-purpose kit
- Cost-effective / space-saving transport

General technical data:

Standard	EN/IEC 61243-1 (DIN VDE 0682-411)

Nominal Voltage Range 110 ... 132 kV / 50 and 16.7 Hz

For 50 Hz three-phase systems and 16.7 Hz centre-earthed monophas traction power lines. Range does not have to be switched.

Category "S"

Type	PHE3S 110 132 S
Part No.	767 131
Nominal voltage (U _N)	110 ... 132 kV
Total length (l _G)	3440 mm
Insertion depth (l _O)	880 mm
DB drawing No.	3 Eku 710 001
DB material No.	01 101 358

Nominal Voltage 66 kV / 16.7 Hz

Category "S" for single-ended monophas systems

Type	PHE3 66 16.7S SN7705
Part No.	769 714
Nominal voltage (U _N)	66 kV
Total length (l _G)	2980 mm

Voltage detectors for outdoor switching stations

PHE4 Voltage Detector High Voltage

PHE4 voltage detector applied in a 110 kV outdoor switching station.

- High nominal voltage range
- Unique plug-in coupling system
- Integrated visual and acoustic indication
- Also for use in wet weather conditions

General Information:

Category "L", 16.7 Hz
Category "L" for centre-earthed monophas traction power lines.

Type	ASPS 110 132 16.7 L
Part No.	767 565
Nominal voltage (U _N)	110 ... 132 kV
Frequency	16.7 Hz
Total length (l _G)	960 mm
DB drawing no.	3 Eku 710 002

Voltage detectors for outdoor switching stations

HSA 194 High-Voltage Indicator

High-voltage indicator used on a 110 kV overhead line.

Nominal Voltage Range
110 ... 420 kV

With plug-in coupling as end fitting for extending the handle.
Storage bag included in delivery.

Type	HSA194 110 420 16.7
Part No.	767 542
Nominal voltage range (U _N)	110 ... 420 kV
Frequency	16.7 Hz
Total length (l _G)	940 mm
Insulating clearance (l _I)	540 mm
DB drawing No.	3 Ekgw 02.54
Verification while climbing the tower	No

Nominal voltage rang 110 ... 420 kV / 16.7 Hz
Easy and safe testing

- For contactlessly verifying that switchgear and high-voltage overhead lines or centre-earthed monophas traction power lines are dead
- Cost-effective / space-saving transport

General Information:

Temperature range	- 25 °C ... + 55 °C, climatic category N
For use in wet weather conditions	
Indication	Acoustic and visual
Self-testing element	Yes
Material (insulating stick)	Glass-fibre reinforced polyester tube

To verify absence of voltage from the tower cross arm, place the green ring of the high-voltage indicator on the last earthed protective fitting (or earthed insulator cap) of the insulator so that the operating head of the high-voltage indicator (see Fig.) points towards the overhead conductor to be tested, which is attached to the other insulator end (longitudinal axis of the device in parallel to the longitudinal axis of the insulator). If the conductor is energised, there is a visual (red flashing light) and acoustic signal.

Voltage detectors for DC voltage systems

PHE/G d.c. Voltage Detector

PHE/G II d.c. voltage detector for d.c. links (ICE power car).

Nominal voltages up to bis 24 kV d.c.

Safe verification of isolation from supply voltage

- For use in direct voltage systems (electrified rail networks, d.c. links)
- Reliable indication
- Easy to use due to compact design
- User-friendly

The test prod of d.c. voltage detectors is colour-coded according to the polarity of the test prod:

- positive pole - red;
- negative pole - blue.

General technical data:

Standard	Based on EN/IEC 61243-1 (DIN VDE 0682-411)
Temperature range	-25 °C ... +55 °C, climatic category N
For use in wet weather conditions	
For	Indoor and outdoor installations
Indication	Visual
Self-testing element	Yes
Material (test prod)	Glass-fibre reinforced polyester tube
Material (indicator)	Plastic, fully insulated
Material (insulating stick)	Glass-fibre reinforced polyester tube
Material (earthing / connecting cable)	Copper cable, highly flexible

PHE/G I for Switchgear Installations, positive pole on indicator with test prod

One stick

- For direct voltage systems with earthed negative pole
- Positive pole: indicator with test prod
- Negative pole: earth clamp with magnet

Type	PHEG1.S P SN7401
Part No.	767 666
Threshold voltage (U _t)	120 V
Nominal voltage (U _N)	1 ... 24 kV
Length (earthing cable)	2000 mm
Total length (l _G)	1260 mm
Insertion depth (l _O)	535 mm

PHE/G I for Switchgear Installations, positive pole on indicator with test prod, angled

One stick

- For direct voltage systems with earthed negative pole
- Positive pole: Indicator with test prod
- Negative pole: Earth clamp

Type	PHEG1.S P SN7240
Part No.	767 636
Threshold voltage (U _t)	60 V
Nominal voltage (U _N)	3.8 kV
Length (earthing cable)	4000 mm
Total length (l _G)	1100 mm

Voltage detectors for DC voltage systems

PHE/G I for Overhead Contact Lines, positive pole on indicator with test prod

One stick (three elements)

- For direct voltage systems with earthed negative pole
- Positive pole: Indicator with test prod
- Negative pole: Earth clamp

PHE/G I for Overhead Contact Lines, negative pole on indicator with test prod

One stick (four elements)

- For d.c. voltage systems with earthed positive pole
- Negative pole: Indicator with test prod
- Positive pole: Earth clamp

Type	PHEG1 FD P 3
Part No.	767 610
Threshold voltage (U _t)	1.1 kV
Nominal voltage (U _N)	3.0 kV
Length (earthing cable)	6000 mm
Total length (l _G)	4125 mm

Type	PHEG1 FD M SN7223
Part No.	767 614
Threshold voltage (U _t)	0.825 kV
Nominal voltage (U _N)	1.65 kV
Length (earthing cable)	8000 mm
Total length (l _G)	4060 mm

PHE/G II, angled positive pole

Two sticks

- For unearthed direct voltage installations
- For d.c. links
- Positive pole: Insulating stick
- Negative pole: Test prod

Type	PHEG2 P SN7346
Part No.	767 639
Threshold voltage (U _t)	150 V
Nominal voltage (U _N)	750 V
Length (connecting cable)	1200 mm
Total length (l _G)	1100 mm

PHE/G II for Switchgear Installations and DC Links

Two sticks

- For unearthed direct voltage installations
- For d.c. links (e.g. electric locomotives; Part No. 767 647)
- Positive pole: Indicator with test prod
- Negative pole: Insulating stick

General technical data:	
Length (connecting cable)	1200 mm

Type	PHEG2 P SN7552	PHEG2 P SN7259
Part No.	767 647	767 645
Threshold voltage (U _t)	90 V	120 V
Nominal voltage (U _N)	1 ... 4.2 kV	1 ... 12 kV
Total length (l _G)	600 mm	1085 mm

PHE/G II for Switchgear Installations

Two sticks

- For unearthed direct voltage installations
- For d.c. links
- Positive pole: Indicator with test prod
- Negative pole: Insulating stick

Type	PHEG2.P SN7517
Part No.	767 671
Threshold voltage (U _t)	90 V
Nominal voltage (U _N)	1 ... 24 kV
Length (connecting cable)	1200 mm
Total length (l _G)	1260 mm
Insertion depth (l ₀)	545 mm

Accessories

Artificial Leather Bag

Artificial Leather Bag for PHE4 and PHE

With carrier handle

Type KLT ...	247 10 22

Fixed Ball Points

Straight fixed ball point mounted on a busbar.

- Suitable for fixing busbar connections according to DIN 43673-1
- Self-locking nut
- M12 or M16 non-cutting formed female thread
- M12 or M16 threaded pin

General technical data:	
Standard	EN/IEC 61230 (DIN VDE 0683-100) and based on DIN 48088-1
Material (fixed ball point)	E-Cu/gal Sn
Material (threaded pin)	StSt A2-70
Hexagon nut	DIN 985-M12-8 / gal Zn; DIN 985-M16-8 / gal Zn
Tightening torque	M10: 30-40 Nm; M12: 50-65 Nm; M16: 100-110 Nm

Straight with Threaded Pin, Nut and Washer

Earth Connecting Plates

Earth connecting plate with fixed ball points and ball head cap with plastic handle.

- Connecting plate with high short-circuit current carrying capacity
- Single-pole connection of the phase arms
- For connecting single-pole earthing and short-circuiting devices to transformers of overhead line masts or to fuse holders
- For fixed ball points (Ø20 mm, Ø25 mm)

General technical data:

Standard	EN/IEC 61230 (DIN VDE 0683-100) and fixed points in accordance with DIN 48088-1
Material (plate)	Aluminium
Material (terminal lug)	4 mm: Cu / gal Sn; 6 mm: HDG steel
Material (fixed point)	E-Cu / brass (CuNi2Si) / gal Sn

With two Fixed Ball Points and Ball Head Cap

With adjustable ball head cap (Ø25 mm) and plastic handle.

For connecting two single-pole earthing and short-circuiting devices to one fixed ball point (Ø25 mm).

Type EAP ...	2 25 KKH HG
Part No.	728 501
Fixed point Ø	25 mm
DB drawing No.	3 Ebgw 01.66
DB material No.	157 540

Terminal Lug with one Fixed Ball Point

For connection to a fuse holder.

Kit for Overhead Contact Lines (non-profile-free)

Telescopic earthing stick with adjusting ring (max. 5 m long)

Type BEV ...	OL NPF K	OL NPF R
Part No.	750 210	750 218
Design	Tommy bar	Ratchet
Cable cross-section	50 mm ²	50 mm ²
Cable length	8500 mm	8500 mm
Max. short-circuit current I _k 0.06 s	32.0 kA	32.0 kA

*) Profile-free earthing means that the earthing cable can be suspended at the tower, thus allowing for limited diesel locomotive operation.

Kit for Transformers at Overhead Line Towers

For earthing on fuse carriers
Telescopic earthing stick with adjusting ring (max. 3.5 m long).

Type BEV ...	US OL ST
Part No.	750 212
Cable cross-section	50 mm ²
Cable length	4000 mm
Max. short-circuit current I _k 0.06 s	34.0 kA
DB drawing No.	3 Ebgw 01.57
DB material No.	237 121

Accessories for Kits for Railway Applications

Canvas bag, empty

With two separate inside pockets and carrier handle.

Type	STT 55 27 30
Part No.	785 111
Dimensions	550 x 270 x 300 mm
Colour	Olive ●

Kit for Supply Lines, Line Feeders, Bypass Lines and other Types of Lines

For earthing the supply line and traction current lines

Telescopic earthing stick with adjusting ring (max. 3.5 m long).

Type BEV ...	SVUL
Part No.	750 213
Cable cross-section	50 mm ²
Cable length	4000 mm
Max. short-circuit current I_k 0.06 s	34.0 kA
DB drawing No.	3 Ebgw 01.57
DB material No.	237 119

Kit for Electric Point and Train Pre-Heating Systems

For the initial equipment of a transformer of electric point and train pre-heating systems.

Type BEV ...	WHA ZVA
Part No.	750 215
Cable cross-section	50 mm ²
Cable length	600 / 1800 mm
Max. short-circuit current I_k 0.06 s	34.0 kA
DB drawing No.	3 Ebgw 01.70
DB material No.	742 402

For voltage detectors for electric point heating systems, please refer to the PHE voltage detector chapter.

Accessories for Kits for Railway Applications

Canvas bag for six-part earthing stick

With carrier handle

Type	STT 110 15
Part No.	769 509
Suitable for	EST
Dimensions	Ø150 x 1100 mm
Colour	Olive ●
DB drawing No.	3 Ebgw 01.67

Earthing Sticks for Railway Applications

Attaching a railway earthing device.

For threaded T pin shafts (bayonet locking mechanism)

- For outdoor use
- Robust aluminium cone coupling
- Telescopic stick, length continuously adjustable by star knob
- Only suitable for phase screw clamps and clamps with long T pin shaft

General technical data:

Standard	EN/IEC 61230 (DIN VDE 0683-100)
Temperature range	-25 °C ... +55 °C

Telescopic, with T pin shaft

For threaded T pin shaft (bayonet locking mechanism).

Type	ESTC SQL RW 3500	ESTC SQL RW 5000
Part No.	769 352	769 502
Total length ($l_{G \max}$ / $l_{G \min}$)	3515 / 1935 mm	5015 / 2685 mm
DB drawing No.	3 Ebgw 01.58	3 Ebgw 01.52
DB material No.	157 534	157 533

Telescopic, with T pin shaft and cable entry

For threaded T pin shaft (bayonet locking mechanism).

The coupling is additionally fitted with a cable entry and a hook for securing the earthing cable and earthing stick at the tower (without adjusting ring).

Type	ESTC SQL H RW 5000
Part No.	769 508
Total length ($l_{G \max}$ / $l_{G \min}$)	5015 / 2685 mm
DB drawing No.	3 Ebgw 01.55
DB material No.	612 142

Six-part, with T pin shaft and aluminium coupling

For threaded T pin shafts (bayonet locking mechanism)

Type	EST SQL RW 4855 TA
Part No.	769 515
Total length ($l_{G \max}$ / $l_{G \min}$)	4855 / 1035 mm

Phase Connecting Elements for Railway Applications

Coupling the earth clamp to the overhead contact line.

- Safe positive-locking earth clamps for railway applications

Earth Clamp for Overhead Contact Lines

With contact electrode and flexible threaded T pin shaft according to DIN 48087. For AC 80 to AC 120 overhead contact lines.

Type	FEK 4 15 TS FSQL	FEK4 15 TS FSQL AB29
Part No.	784 755	784 756
Clamping range Ø	4 ... 15 mm	4 ... 15 mm
Anti-rotation cable lug	PK2 (Ø10.5 mm)	PK2 (Ø10.5 mm)
For cable material	Cu	Al
For cable cross-section	50 mm ²	70 mm ²
Max. short-circuit current I _k 0.06 s	34.0 kA	32.0 kA
DB drawing No.	3 Ebgw 01.54	Ebgw 01.85
DB material No.	157 536	–

Line Clamp

With contact electrode and threaded T pin shaft according to DIN 48087. For supply and traction power lines.

Type	LK 4 40 TS SQL
Part No.	784 352
Clamping range Ø	4 ... 40 mm
Anti-rotation cable lug	PK2 (Ø10.5 mm)
DB drawing No.	3 Ebgw 01.65
DB material No.	157 539

Earth Connecting Elements for Railway Applications

Clamp for railway tracks mounted on the track profile.

- Safe earth connection elements for railway applications

Clamp for Railway Tracks with Tommy Bar

With detachable tommy bar (locking spring). For profile-free earthing of track profiles S49, S54, S64 and UIC60.

Type	SAK PFE KN	SAK PFE KN AB29
Part No.	792 450	792 451
Anti-rotation cable lug	PK2 (Ø10.5 mm)	PK2 (Ø10.5 mm)

DB material No.	778 794

Voltage Limiting Devices

- Electrical isolation of insulated track sections and earthed parts of installations
- Safe equipotential bonding in case of a short-circuit or earth fault at the overhead contact line due to high-current-resistant welding of the electrodes
- Discharge of lightning overvoltages without short-circuit formation due to lightning-resistant SDS ... voltage limiting device
- Short-circuit withstand capability up to 25 kA_{rms} / 100 ms; 36 kA_{rms} / 75 ms

EN 50122-1 describes the use of voltage limiting devices for d.c. and a.c. traction systems for so-called "open traction system earthing" of conductive components of the overhead contact line and pantograph zone.

Voltage limiting devices (SDS ...) are used to prevent the occurrence of hazardous surges between the insulated tracks or track sections of electric railways and earthed parts of the installation.

Their function is to permanently connect parts of the installation in the overhead contact line and pantograph zone to the return circuit as soon as the threshold voltage is exceeded.

In case of atmospheric overvoltages, the lightning-resistant SDS ... voltage limiting device is capable of returning to its initial state after discharging the impulse current. Only when the specified lightning current load is exceeded, does a permanent short circuit occur due to high-current-resistant welding of the electrodes, making it necessary to replace the fuse link.

The SDS voltage limiting device consists of a spark gap unit and the respective connecting kit and can be directly connected to the rail or overhead contact line tower.

The spark gap unit of type SDS 1 (Part No. 923 110) developed by DEHN has also been approved by the German Federal Railway Authority (EBA).

SDS 1

Voltage limiting device for a power-frequency sparkover voltage ≤ 940 V.

Type SDS ...	1
Part No.	923 110
VLD type (EN 50122-1)	VLD-F
Power frequency sparkover voltage (U_{av})	≤ 940 V
d.c. sparkover voltage (U_{ag})	700 V -14% ... +28%
Impulse sparkover voltage	≤ 1400 V (1 kV/ μ s)
Self-extinguishing capability	300 A / 65 V
Lightning current discharge capacity (10/350 μ s) 0.1x / 0.5x / 1x	5 kA
Lightning current withstand capability (10/350 μ s)	100 kA
Safe short-circuit due to welding of the electrodes in case of alternating currents	≥ 2.5 kA / 1000 V / 30 ms, ≥ 1.5 kA / 1000 V / 100 ms
Safe short-circuit due to welding of the electrodes in case of direct currents	≥ 750 A / 250 ms
Short-circuit withstand capability	25 kA _{rms} / 100 ms; 36 kA _{rms} / 75 ms
Long-term current	1 kA _{rms} for $t \leq 120$ s
Leakage current (I_{lc})	< 1 μ A for 100 V d.c.
Operating temperature range (T_U)	-40 °C ... +80 °C
To be mounted with mast adapter MA SDS M12 or SIEMENS No. 8WL6503-xx	
Approvals	EBA
DB drawing No.	4 Ebs 15.13.20 Sheet 2

SDS 2

Voltage limiting device for a d.c. sparkover voltage of 350 V.

Type SDS ...	2
Part No.	923 117
VLD type (EN 50122-1)	VLD-F
d.c. sparkover voltage (U_{ag})	350 V +/- 20 %
Impulse sparkover voltage	≤ 900 V (1 kV/ μ s)
Lightning current discharge capacity (10/350 μ s) 0.1x / 0.5x / 1x	2 kA
Lightning current withstand capability (10/350 μ s)	25 kA
Safe short-circuit due to welding of the electrodes in case of direct currents	≥ 600 A / 250 ms
Short-circuit withstand capability	25 kA _{rms} / 100 ms; 36 kA _{rms} / 75 ms
Long-term current	1 kA _{rms} for $t \leq 120$ s
Leakage current (I_{lc})	< 1 μ A for 100 V d.c.
Operating temperature range (T_U)	-40 °C ... +80 °C
To be mounted with mast adapter MA SDS M12 or SIEMENS No. 8WL6503-xx	

SDS 3

Voltage limiting device for a d.c. sparkover voltage of 550 V.

Type SDS ...	3
Part No.	923 116
VLD type (EN 50122-1)	VLD-F
d.c. sparkover voltage (U_{ag})	550 V +/- 20 %
Impulse sparkover voltage	≤ 1000 V (1 kV/ μ s)
Lightning current discharge capacity (10/350 μ s) 0.1x / 0.5x / 1x	2.5 kA
Lightning current withstand capability (10/350 μ s)	25 kA
Short-circuit withstand capability	25 kA _{rms} / 100 ms
Operating temperature range (T_U)	-40 °C ... +80 °C
To be mounted with mast adapter MA SDS M12 or SIEMENS Nr. 8WL6503-xx	

SDS 4

Voltage limiting device for a d.c. sparkover voltage of 230 V.

Type SDS ...	4
Part No.	923 118
VLD type (EN 50122-1)	VLD-F
d.c. sparkover voltage (U_{ag})	230 V +/- 20%
Impulse sparkover voltage	≤ 650 V (1 kV/ μ s)
Lightning current discharge capacity (10/350 μ s) 0.1x / 0.5x / 1x	2.5 kA
Lightning current withstand capability (10/350 μ s)	25 kA
Impulse current discharge capacity (8/20 μ s) 0.1x / 0.5x / 1x	20 kA
Safe short-circuit due to welding of the electrodes in case of direct currents	≥ 600 A / 250 ms
Short-circuit withstand capability	25 kA _{rms} / 100 ms; 36 kA _{rms} / 75 ms
Long-term current	1 kA _{rms} for $t \leq 120$ s
Leakage current (I_{lc})	< 1 μ A for 100 V d.c.
Operating temperature range (T_U)	-40 °C ... +80 °C
To be mounted with mast adapter MA SDS M12 or SIEMENS No. 8WL6503-xx	

SDS 5

Voltage limiting device for a d.c. sparkover voltage of 120 V.

Type SDS ...	5
Part No.	923 119
VLD type (EN 50122-1)	VLD-F
d.c. sparkover voltage (U_{ag})	120 V +/- 20 %
Impulse sparkover voltage	≤ 600 V (1 kV/ μ s)
Lightning current discharge capacity (10/350 μ s) 0.1x / 0.5x / 1x	2 kA
Lightning current withstand capability (10/350 μ s)	25 kA
Impulse current discharge capacity (8/20 μ s) 0.1x / 0.5x / 1x	20 kA
Safe short-circuit due to welding of the electrodes in case of direct currents	≥ 600 A / 250 ms
Short-circuit withstand capability	25 kA _{rms} / 100 ms; 36 kA _{rms} / 75 ms
Long-term current	1 kA _{rms} for $t \leq 120$ s
Leakage current (I_{lc})	< 1 μ A for 100 V d.c.
Operating temperature range (T_U)	-40 °C ... +80 °C
To be mounted with mast adapter MA SDS M12 or SIEMENS No. 8WL6503-xx	

Accessories for Voltage Limiting Devices

Mast adapter for SDS voltage-limiting devices

For mounting on the mast support profile of a contact wire mast with FI 8-12 mm.

Type	MA SDS M12
Part No.	723 199
Lightning current carrying capability (10/350 μ s)	25 kA
Short-circuit withstand capability	21 kA _{rms} / 30 ms
Long-term current	1 kA _{rms} at $t \leq 120$ s
Leakage current (I_{lc})	< 1 μ A at 100 V d.c.
Dimensions of the threaded pin	M12
Material	Brass
Degree of protection of the inner enclosure	IP 67
